Nutrition for a Changing World engages students like no other nutrition textbook. Real stories – about real people and real science – are integrated into every chapter, bringing context and relevance to the core science. Infographics in the style of Scientific American magazine are like “science storyboards” that guide students step-by-step through essential processes and concepts. Coverage of timely topics such as gluten-free diets, the diabetes epidemic, and global nutrition exemplify the book’s contemporary approach to nutrition science. Nutrition for Changing World is also the only product for the course to offer automatically graded diet analysis activities. AnalyzeMyDiet provides both a diet tracker and personalized, auto-graded diet analysis activities built to cover a standard 3- to 7-day diet analysis assignment, freeing instructors from hand-grading these projects.

Rabbit production systems are important providers of meat in many parts of the world. The species has many advantages, including rapid growth rate and good reproductive performance. It is adaptable in that it may be reared under intensive conditions, but is also successful under small scale production systems, which are of considerable value in the economics of emerging countries. Although not a ruminant, its digestive system allows it to thrive on high fiber raw materials. The meat has a comparatively healthy low fat image, which is increasingly important to consumers and there appear to be few impediments, such as religious considerations, to rabbit meat consumption. However, the science of rabbit production has received relatively little attention, although there are recognized rabbit research groups worldwide and a wealth of data exists in a scattered form in the literature. This book brings together that expertise under one cover. It covers a range of topics, from digestive physiology and nutrient/energy allowances to feed formulation and production. The information provided will be an invaluable asset to those involved in rabbit rearing, whether as companion animals or for meat production, and will also provide data of considerable interest to animal nutritionists and zoologists working on rabbits and related mammals.
