This edited volume examines the Seal of Biliteracy (SoBL), a relatively new policy initiative that has received little attention in scholarly and practical literature. The contributions seek to expand

the literature by presenting case studies of policy implementation in diverse contexts across the United States. This book is organized into four sections: (1) introduction to the SoBL, including history of the policy initiative and national trends in policy design and implementation, (2) case studies of macro-level policy implementation, including a diverse array of contexts across the country that have approached the SoBL in unique ways (e.g., legislation v. educational code, prioritizing world v. home languages), (3) case studies of

micro-level implementation, including schools and districts that award the SoBL to diverse student populations through various language programs (e.g., English-dominant v. linguistically diverse; world language v. dual-language programs), and (4) conclusions and future directions, including actionable next steps for policy makers, administrators, educators, and researchers. Members of various professional organizations will benefit from this text, including the National Association for Bilingual Education (NABE), Teachers of English to Speakers of Other Languages (TESOL), the American Council for Teaching of Foreign Languages (ACTFL), as well as participants in local affiliates for bilingual, English as a second language (ESL), and world language education.

This book addresses the need for tests that can diagnose the strengths and weaknesses in learners' developing foreign language proficiency. It presents the rationale for, and research surrounding, the development of DIALANG, a suite of internet-delivered diagnostic foreign language tests funded by the European Commission. The word 'diagnosis' is common in discussions in language education

and applied linguistics, but very few truly diagnostic tests exist. However, the diagnosis of foreign language proficiency is central to helping learners make progress. This volume explores the nature of diagnostic testing, emphasizing the need for a better understanding of the nature of appropriate diagnosis. The book starts with a debate about how diagnostic testing might most appropriately be developed. Charles Alderson argues that the field has

neglected to construct diagnostic tests, partly because other forms of testing have dominated the field. Alderson examines how proficiency has been diagnosed in the key areas of language: reading, listening, writing, grammar and vocabulary. The value of self-assessment is discussed and exemplified as a key component in developing learners', and teachers', awareness of the complexity of language learning. The book ends with

a consideration of and recommendations for future developments in the diagnosis of foreign language proficiency.

****Testimonial**** I just wanted to drop you guys a

line and tell you that I passed my final CLEP exam last Monday which gives me all of the credits I need to graduate. I have taken 30 credits worth of CLEP exams and I've passed them all by using your study guides. I actually purchased one of your study guides and failed my first test. I didn't fail because of your guide though, I failed because I didn't manage my time effectively and I ran short. I looked at your study guide after failing though, and a lot of the information on your study guide was very relevant to what was on the test. So, I tried again with a different test and a different study guide of yours. I passed. This pattern continues for 30 credits. I graduate on June 9th thanks to you guys, so I wanted to say thank you. The guides were worth every penny. Thanks, -John S.****I would like to thank you for your study guides. This study explores the word identification processes used by adult bilingual Spanish/English readers of varying proficiencies in both L1 and L2, and how these relate to reading comprehension levels in L1 and L2. It has been proposed in word reading research that lexical processing (accessing the word directly from the lexicon) is more efficient than sublexical processing (assembling the phonology of a word letter by letter). This investigation is concerned with the type of bilingual processing used by readers of varying ability. Three groups of Spanish/English bilingual readers, who differed across both L1 and L2 in their reading comprehension

and listening task in both Spanish (Experiment 1) and English (Experiment 2). A third monolingual control group performed the task in their L1, English (Experiment 3). The on-line procedure involved presenting words visually and aurally, for participants to make a yes/no choice as to whether the words match. This bimodal task, not previously used in second language research, presented equal difficulty for readers of all proficiency types. The written words appeared in either uniform (lower) case or alternating (aLtErNaTiNg) case, to test reliance on lexical processing during word identification. Overall, L1 Spanish readers of all proficiency levels used similar strategies for L1 word identification, but the less proficient readers showed this effect when orthographic form was disrupted, i.e., when the stimuli were presented in alternating case. In L2, the less proficient readers tended

to rely more on a sublexical strategy, while the high proficiency group used a lexical strategy. Crosslinguistic correlations indicated that readers who showed more disruption (as evidenced by higher reaction times) to alternating case stimuli in L1 Spanish had lower proficiency levels in English, indicating that L1 reading skill influences L2 reading proficiency. These findings combined support dual route models of reading, and have important implications for educational decisions: both sublexical and lexical skills are emergent in L1 and L2, and should be focused on in instructional settings.

This book investigates multilingual literacy practices, explores the technology applied in different educational frameworks, the centrality of multilingual literacy in non-formal, informal and formal educational contexts, as well as its presence in everyday life. Thematically clustered in four parts, the chapters present an overview of theory related to multilingual literacy, address

the methodological challenges of research in the area, describe and evaluate projects set up to foster multilingual literacy in a variety of educational contexts, analyze the literacy practices of multilinguals and their contribution to language and literacy acquisition. This volume aims to initiate a change in paradigms, shifting from structured and conservative problematizations to inclusive and diverse conceptualizations and practices. To that end, the book showcases explorations of different methodologies and needs in formal and non-formal educational systems; and it serves as a springboard for developing multivocal participatory spaces with opportunities for learning and identity-building for all multilinguals, across different settings, languages, ages and contexts.

New York 3rd Grade Math Test Prep Spanish Version Multilingual Matters

As the United States continues to be a nation of immigrants and their children, the nation's school systems face increased enrollments of students whose primary language is not English. With the 2001 reauthorization of the Elementary and

Secondary Education Act (ESEA) in the No Child Left Behind Act (NCLB), the allocation of federal funds for programs to assist these students to be proficient in English became formula-based: 80 percent on the basis of the population of children with limited English proficiency¹ and 20 percent on the basis of the population of recently immigrated children and youth. Title III of NCLB directs the U.S. Department of Education to allocate funds on the basis of the more accurate of two allowable data sources: the number of students reported to the federal government by each state education agency or data from the American Community Survey (ACS). The department determined that the ACS estimates are more accurate, and since 2005, those data have been basis for the federal distribution of Title III funds. Subsequently, analyses of the two data sources have raised concerns about that decision, especially because the two allowable data sources would allocate quite different amounts to the states. In addition, while shortcomings were noted in the data provided by the states, the ACS estimates were shown to fluctuate between years, causing concern among the states about the unpredictability and unevenness of program funding. In this context, the U.S. Department of Education commissioned

the National Research Council to address the accuracy of the estimates from the two data sources and the factors that influence the estimates. The resulting book also considers means of increasing the accuracy of the data sources or alternative data sources that could be used for allocation purposes. Research & Education Assoc.

Brian Huot's aim for this book is both ambitious and provocative. He wants to reorient composition studies' view of writing assessment. To accomplish this, he not only has to inspire the field to perceive assessment--generally not the most appreciated area of study--as deeply significant to theory and pedagogy, he also has to counter some common

misconceptions about the history of assessment in writing. In (Re)Articulating Writing Assessment, Huot advocates a new understanding, a more optimistic and productive one than we have seen in composition for a very long time. Assessment, as Huot points out, defines what is valued by a teacher or a society. What isn't valued isn't assessed; it tends to disappear from the curriculum. The dark side of this truth is what many teachers find troubling about large scale assessments, as standardized tests don't grant attention or merit to all they should. Instead, assessment has been used as an interested social mechanism for reinscribing current power relations and class systems.
