Object-based and object-oriented programming is to encapsulate an algorithm and a set of data structures in an object. Therefore, a new concept was formed:

Object = algorithm + data structure  
Program = (Object+Object+Object+...)+Message  
Or expressed as Program = Object S+ Message  
“ Object ” means “ multiple objects ” .

The object-oriented languages focus on components that the user perceives, with objects as the basic unit. You figure out all the objects by putting all the data and operations that describe the user's interaction with the data. Object-Oriented technology has many benefits:

### C++ OOP (Object-Oriented Programming)

Characteristics of an Object Oriented Programming language Class: The building block of C++ that leads to Object-Oriented programming is a Class. It is a user-defined data type, which holds its own data members and member functions, which can be accessed and used by creating an instance of that class.

A class is like a blueprint for an object.
