The fundamental
mathematical tools
needed to understand
machine learning
include linear algebra,
analytic geometry,
matrix decompositions,
vector calculus,
optimization, probability
and statistics. These
topics are traditionally
taught in disparate
courses, making it hard
for data science or
computer science
students, or
professionals, to
efficiently learn the
mathematics. This self-
contained textbook
bridges the gap
between mathematical
and machine learning
texts, introducing the
mathematical concepts
with a minimum of
prerequisites. It uses
these concepts to
derive four central
machine learning
methods: linear

component analysis,
Gaussian mixture

models and support
vector machines. For
students and others
with a mathematical
background, these
derivations provide a
starting point to
machine learning texts.
For those learning the
