The first statement invokes rectOne's getArea() method and displays the results. The second line moves rectTwo because the move() method assigns new values to the object's origin.x and origin.y.. As with instance fields, objectReference must be a reference to an object. You can use a variable name, but you also can use any expression that returns an object reference.
Objects First With Java Using Bluej Solutions
It takes a truly objects first approach to teaching problem solving using Java. These are

complicated concepts so the book uses the development environment BlueJ to help the student's understanding. BlueJ has a strong emphasis on visualization and interaction techniques, and allows the students to manipulate objects and call methods as a The book has a very clear identity.
