This book provides an international comparative study of the implementation of disability rights law and policy focused on the emerging principles of self-determination and personalisation. It explores how these principles have

been enshrined in the United Nations Convention on the Rights of Persons with Disabilities and how different jurisdictions have implemented them to enable meaningful engagement and participation by persons with disabilities in society. The philosophy of 'active citizenship' underpinning the Convention - that all citizens should (be able to) actively participate in the community - provides the core focal point of this book, which grounds its analysis in exploring how this goal has been imagined and implemented across a range of countries. The case studies examine how different jurisdictions have reformed disability law and policy and reconfigured how support is administered and funded to ensure maximum choice and independence is accorded to people with disabilities.

'There is a voice that whispers to me on the pillow. I have no idea if it is part of the dream, a hallucination, or reality. It talks of children, bringing news of a girl called Grace who loves me very much and a new baby boy called Freddie, who apparently needs me to get better... It stirs a part of me, even in my coma, reminding me that I'm thirty-eight and in love with the most beautiful woman in the world. It tells me that one third of me is gone but what's left is enough; that the thing is, above all, to survive.' When Tom Ray put his young daughter to bed one chilly

December evening, he had everything he could ever want - the house of his dreams, a beautiful wife and a second baby on the way. By the next morning all of this was in jeopardy as Tom succumbed to the devastating illness that is sepsis. Starfish tells Tom and Nic Ray's truly inspirational story of their life before, during and after the illness which claimed Tom's lower arms, legs, and a portion of his face. Heart-breakingly honest and affecting, their story charts the devastating effects of Tom's illness, Nic's heroic struggle to cope and, ultimately, the love and hope that has held their family together in the ensuing years. A tragic yet beautiful tale of a couple whose love is tested to its limit after their perfect life falls apart in a single moment.

"Yasmin Ghorami is twenty-six, in training to be a doctor (like her Indian-born father) and engaged to the charismatic, upper-class Joe Sangster, whose domineering mother Helen is a famous feminist. Though both Yasmin's parents and Joe's mother approve of the marriage, the cultural gulf between them is vast as, it turns out, is the gulf in sexual experience between Yasmin and Joe. The novel opens as Yasmin, her parents, and her brother pile into their car, packed with Indian food prepared by Yasmin's mother, to go to dinner to meet Joe's

mother in her elegant townhouse in one of London's poshest neighborhoods. Contrary to all of Yasmin's fears, her unsophisticated and somewhat flamboyant mother is embraced and celebrated by Helen and her friends"--

Occupational therapy is an allied health profession with an underlying belief that engaging in occupations promotes both health and wellness. This comprehensive text lays the foundation for occupation-based practice and addresses the contextual issues of working within the acute care setting. The chapters help to demystify medical conditions and issues routinely encountered by occupational therapists working in this practice area. Detailed research

covers the importance of occupational therapists' knowledge of how diseases affect the human body, including the cardiovascular, nervous, and endocrine systems. Chapters review the evaluation process, including chart review, measures, and interpretations and recommendations for intervention to ensure the ultimate level of independence for each patient. Occupational Therapy in Acute Care is designed specifically for therapists working in a hospital setting to acquire better knowledge of the various body systems, common conditions, diseases, and procedures. Students and educators will find this new publication to be the most useful text available on the topic. The book features color illustrations of the human

body's systems and functions, as well as tables delineating the signs and symptoms for various diseases. HIGHLIGHTS include: * Evaluation of the Acute Care Patient * The Intensive Care Unit (ICU) * The Cardiac System * The Vascular System * The Pulmonary System * The Nervous System * Orthopedics and Musculoskeletal Disorders * The Endocrine System * The Gastrointestinal System * The Genitourinary System * Oncology * Infectious Diseases and Autoimmune Disorders * Dysphagia * Transplantation * Burns * Appendices -- Common diagnostic tests, medications, deconditioning and immobility, energy conservation, patients with altered mental status, low vision, bariatrics, vertigo, safe patient handling, pain management, evidence-

The Framework, an official

AOTA document, presents a summary of interrelated constructs that define and guide occupational therapy practice. The Framework was developed to articulate occupational therapy's contribution to promoting the health and participation of people, organizations, and populations through engagement in occupation. The revisions included in this second edition are intended to refine the document and include language and concepts relevant to current and emerging occupational therapy practice. Implicit within this summary are the profession's core beliefs in the positive relationship between occupation and health and its view of people as occupational beings. Numerous resource materials include a glossary, references and a bibliography, as well as a table of changes between the editions.

"The Kawa (Japanese for

river) model uses a familiar metaphor of nature as an effective medium to translate subjective views of self, life, well-being and the meanings of occupations. The familiarity of the metaphor - to both therapists and clients alike - and the ease with which its framework can be comprehended and applied makes this model an effective and highly relevant tool for an increasingly diverse global clientele." "The Kawa Model will challenge occupational therapy students, practitioners, educators and researchers to comprehend their theory in a critical light and consider how to advance their practice and profession toward a more inclusive and meaningful direction."--BOOK JACKET.

Some people with Parkinson's Disease find they can't speak very well while others lose the ability to write or control a knife and fork. Some get treated like children while others are ignored. Many manage their disease for years and continue to live extremely fruitful and fulfilling lives. But it's always there, in the back of one's mind. How long will I keep this up? Over 120,000 people in the UK have Parkinson's

Disease, and this figure is rising. It can strike very early in life, as with the actor Michael J. Fox, or much later. It is a progressive, neurological disorder, treated mainly with drug therapy but also alleviated with physical therapy and diet. Although each person with Parkinson's is different, and the ability to perform movements may differ from one day to the next, Parkinson's has a dramatic effect on a person's quality of life and also affects those around the sufferers. This is a compassionate and helpful guide to the disease and its treatments. The good news is that Parkinson's can be controlled very effectively for many years with the right treatment

and care. This definitive handbook allows you to ask all the right questions and to understand the disease so that the answer to the question above is, 'as long as possible'.

The updated and expanded 2nd edition of FINE MOTOR SKILLS IN CHILDREN WITH DOWN SYNDROME continues to be a popular, practical guide to understanding fine motor skills in children with Down syndrome and helping them develop these skills from birth through early adolescence.

The first edition won a Parent's Choice Award in 1999. The author, an occupational therapist who has worked extensively with children with Down syndrome, is also the parent of a teenager with Down syndrome. She offers parents and professionals dozens of easy, home- and school-based activities, illustrated with black and white photos, which help children gradually acquire the skills they need for fine motor development. Readers learn how to incorporate work on fine motor skills into everyday activities and routines and to emphasise tasks that children can use throughout life -- play, self-help, printing, cutting with scissors, and computer use. New to this edition is a chapter on sensory processing and how the sensory system affects behaviour and learning in children with Down syndrome. Parents learn strategies that can help children handle various sensory problems so they can continue to learn daily living

skills. Bruni includes new information on determining when a child is ready for 'pre-printing' activities (things a child can do to prepare for trying to print letters) and how to introduce related concepts (up & down; top & bottom; start & stop; left & right). The 2nd edition also includes more information on ways to help children learn self-help skills, such as dressing, using a fork and spoon, and becoming potty trained. This new and improved edition gives parents and professionals the expertise and confidence they need to help children build fine motor abilities and become more independent. Target Audience: Parents of children with Down syndrome, early intervention specialists, occupational and physical therapists, teachers

Rehabilitation in Cancer Care is an essential

clinical resource for all Allied Health Professionals working within or entering this specialist area. It provides practical guidance for the rehabilitation of people with cancer or those receiving palliative care. As well as explaining the key skills required at every stage of the cancer journey, the book specifically offers advice on diagnosis, treatment, management and effective interventions. Furthermore the role of each member of the interdisciplinary team is clearly explained at each stage, as is the importance of teamwork and holistic care. Section 1 introduces the reader to the rationale for the rehabilitation of people

with cancer or those receiving palliative care, Section 2 looks at the multi-professional management of common cancers and Section 3 looks at symptom management.
