Epipelagic Zone- The surface layer of the ocean is known as the epipelagic zone and extends from the surface to 200 meters (656 feet). It is also known as the sunlight zone because this is where most of the visible light exists. With the light come heat. This heat is responsible for the wide range of temperatures that occur in this zone.

 A simple ocean zone designation is between the open water (pelagic zone) and the ocean floor (benthic zone).
 2. Organisms that can actively swim independent of currents in pelagic environments are referred to as nekton, while those that live on the ocean

floor are referred to as benthos.
 3.
Online Answer Key / Scholastic Ecologists typically divide the ocean into zones based on depth and distance from shore. Photic Zone. regions of a body of water where light penetrates, enabling photosynthesis. Aphotic Zone. the part of the ocean beneath the photic zone, where light does not penetrate sufficiently for photosynthesis to occur.

Ocean Zones Answer Key - integ.ro
 There are three main ocean zones based on distance from shore. They are the intertidal zone, neritic zone, and oceanic zone. Distance from shore influences how many nutrients are in the water. Why? Most nutrients are washed into ocean water from land. Therefore, water closer to shore tends to have more nutrients. Living things need nutrients.
Here's a nice printable on the ocean zones. Answer key can ...
 This small flip book covers 4 basic zones of the ocean;

Intertidal, Neritic, Open and Deep.
Includes the Ocean Zones
