Twenty First Century Science: GCSE Biology Teacher Handbook  
Coordination Group Publication

This book aims to cover all the GCSE Physics material needed to meet the specifications of the examining boards Edexcel, AQA, WJEC and OCR (both 21st Century Science and Gateway) both for single and double awards. The content also covers the additional topics necessary for the Physics GCSE single award. It is the third book in the series following 'Biology at a Glance' and 'Chemistry at a Glance' and it encourages learners to use a mind mapping approach to revision. Just like the other books in the series, each page contains clear annotated illustrations that will help the reader to assimilate the facts quickly and commit them to memory. The book covers force and energy, energy and its transfer (including waves, electrical and thermal energy), electromagnetism and radioactivity. It goes on to describe a wide range of the practical applications of physics and concludes with material on our place in the universe. To comply with the latest GCSE specifications, 'How Science Works' permeates all aspects of the book which also provides questions on all the topics covered, to reinforce skills and understanding.

## Physics Triple Science Supplement Topics

Coordination Group Publication

This clearly written and compelling look at physics and physicists offers “ thousands of new ways to see our daily world more richly ” (Douglas Hofstadter, author of G ö del, Escher, Bach). For many of us, physics has always been a thing of mystery and complexity. K. C. Cole, an award-winning science writer, specializes in making its wonders accessible to the everyday reader. This book uses lively prose, metaphors, and anecdotes to allow us to comprehend the nuances of physics: gravity and light, color and shape, quarks and quasars, particles and stars, force and strength. It also shows us how the physical world is so deeply intertwined with the ways we think about culture, poetry, and philosophy, and explores the workings of such legendary scientific minds as Richard Feynman, Victor Weisskopf, brothers Frank Oppenheimer and J. Robert Oppenheimer, Philip Morrison, Vera Kistiakowsky, and Stephen Jay Gould.

“ An exemplary science writer . . . For readers without scientific background, Cole gracefully introduces relativity, quantum theory, optics, astrophysics, and other significant disciplines, never getting bogged down in unnecessary explanation. Thus, you may not learn all about thermodynamics from reading her chapter on it, but you will learn enough to think seriously about the entropy in your own life. Cole sprinkles her text with comments from famous scientists— ‘ Space is blue, and birds fly in it, ’ said Heisenberg, and Faraday said, ‘ Nothing is too wonderful to be true ’ —that are not only delightful in themselves but perfectly suited to her own text. No review of Cole ’ s book could be too wonderful to be true. ” —Booklist
