How should historians speak
truth to power – and why does

it matter? Why is five hundred years better than five months or five years as a planning horizon? And why is history – especially long-term history – so essential to understanding the multiple pasts which gave rise to our conflicted present? The History Manifesto is a call to arms to historians and everyone interested in the role of history in contemporary society. Leading historians Jo Guldi and David Armitage

identify a recent shift back to longer-term narratives, following many decades of increasing specialisation, which they argue is vital for the future of historical scholarship and how it is communicated. This provocative and thoughtful book makes an important intervention in the debate about the role of history and the humanities in a digital age. It will provoke discussion among policymakers, activists and entrepreneurs as well as ordinary listeners, viewers, readers, students and teachers. This title is also available as Open Access. [AP Oxford University Press](#) Getting the right diagnosis is a key aspect of health care - it provides an explanation of a patient's health problem and informs subsequent health care decisions. The diagnostic process is a complex, collaborative activity that involves clinical reasoning and

information gathering to determine a patient's health problem. According to [Improving Diagnosis in Health Care](#), diagnostic errors-inaccurate or delayed diagnoses-persist throughout all settings of care and continue to harm an unacceptable number of patients. It is likely that most people will experience at least one diagnostic error in their lifetime, sometimes with devastating consequences. Diagnostic errors may cause harm to patients by preventing or delaying appropriate treatment, providing unnecessary or harmful treatment, or resulting in psychological or financial repercussions. The committee concluded that improving the diagnostic process is not only possible, but also represents a moral,

professional, and public health imperative. Improving Diagnosis in Health Care a continuation of the landmark Institute of Medicine reports To Err Is Human (2000) and Crossing the Quality Chasm (2001) finds that diagnosis- and, in particular, the occurrence of diagnostic errors "has been largely unappreciated in efforts to improve the quality and safety of health care. Without a dedicated focus on improving diagnosis, diagnostic errors will likely worsen as the delivery of health care and the diagnostic process continue to increase in complexity. Just as the diagnostic process is a collaborative activity, improving diagnosis will require collaboration and a widespread commitment to change among health care professionals, health care

organizations, patients and their families, researchers, and policy makers. The recommendations of Improving Diagnosis in Health Care contribute to the growing momentum for change in this crucial area of health care quality and safety.

A Critical Examination of the Advanced Placement Program
National Academies Press

In a 2009 study of the debt collection industry, the Commission concluded that the " most significant change in the debt collection business in recent years has been the advent and growth of debt buying. " " Debt buying " refers to the sale of debt by

creditors or other debt owners to buyers that then attempt to collect the debt or sell it to other buyers. Debt buying can reduce the losses that creditors incur in providing credit, thereby allowing creditors to provide more credit at lower prices. Debt buying, however, also may raise significant consumer protection concerns. The FTC receives more consumer complaints about debt collectors, including debt buyers, than about any other single industry. Many of these complaints appear to have their origins in the quantity and quality of information that collectors have about

debts. In its 2009 study, the Commission expressed concern that debt collectors, including debt buyers, may have insufficient or inaccurate information when they collect on debts, which may result in collectors seeking to recover from the wrong consumer or recover the wrong amount. The FTC initiated this debt buyer study in late 2009 for two main purposes. First, the FTC sought to obtain a better understanding of the debt buying market and the process of buying and selling debt. Second, the Commission wanted to explore the nature and extent of the relationship, if any,

between the practice of debt buying and the types of information problems that the FTC has found can occur when debt collectors seek to recover and verify debts. Many stakeholders recognize the concerns that have been raised about debt buying, including consumer groups, members of Congress, federal and state regulatory and enforcement agencies, and the debt buyer industry itself. Indeed, the debt buyer industry has launched a self-regulatory effort to address some of these concerns, and the FTC is encouraged by that effort. This study of debt buyers is the first large-scale empirical

assessment of the debt buying sector of the collection industry. The FTC hopes that its findings contribute to a greater understanding of debt buying, enhance ongoing reform efforts, and prompt further study of the industry. To conduct its study, the Commission obtained information about debts and debt buying practices from nine of the largest debt buyers that collectively bought 76.1% of the debt sold in 2008, with six of these debt buyers providing the information the Commission used in most of its analysis. The FTC also considered its prior enforcement and policy work related to debt

collection, as well as available research concerning debt buying. The study focused on large debt buyers because they account for most of the debt purchased; it did not address the practices of smaller debt buyers that are a frequent source of consumer protection concerns, a limitation that must be considered in evaluating the study's findings. The Commission acquired and analyzed an unprecedented amount of data from the studied debt buyers, which submitted data on more than 5,000 portfolios, containing nearly 90 million consumer accounts, purchased during the three-year

study period. These accounts had a face value of \$143 billion, and the debt buyers spent nearly \$6.5 billion to acquire them. Most portfolios for which debt buyers submitted data were credit card debt, with such debt accounting for 62% of all portfolios and 71% of the total amount that the buyers spent to acquire debts. In addition to these data, the debt buyers provided copies of many purchase and sale agreements between themselves and sellers of debts. The debt buyers also submitted narrative responses to questions concerning their companies and their practices, as well as the debt buying

industry. The key findings of the study are as follows:

GCSE Mathematics for OCR Foundation Student Book
Packt Publishing Ltd

Now going into its 9th edition, the successful textbook *Book-keeping and Accounts* is a vital guide for students undertaking studies of book-keeping and accounting for the first time. Through its gradual introduction of topics, explanation of technical terminology in a clear, easy to understand way, this text provides an accessible and reliable guide for any student in their undergraduate career.

New to this edition:

- Fully compliant with International Financial Reporting Standards (IFRS), with current IFRS terminology.
- Questions and exercises to test your understanding and

- help with revision.
- Selected chapters amended and re-structured.
- Full explanation of HMRC changes in VAT relating to cash discounts.
- Illustrations and diagrams to help explain key concepts.
- Updated 'learning objectives' and 'chapter summaries', to reflect developments in the financial environment
- Easy to understand to double entry book-keeping using the 'IN' and 'OUT' approach. With its highly regarded authorship this text is used by lecturers for teaching students undertaking the following qualifications and examinations; Association of Accounting Technicians (AAT), International Association of Book-keepers (IAB), A Level Accounting, Oxford Cambridge and Royal Society

of Arts (OCR), and as a general foundation text for personnel employed in the accountancy profession.

Accompanying the text is a collection of resources to support both lecturers and students which can be found at

This volume is the first book-length study of disguised forms of plagiarism

that mar the body of published research in humanities disciplines. As a contribution to applied research ethics, this practical guide offers a typology of the principal forms of disguised plagiarism. It provides detailed analyses, in-depth case studies, and useful flow charts to assist researchers, editors, and publishers in protecting the integrity of the body of published research literature. Disguised plagiarism is more subtle than copy-and-paste plagiarism; all its varieties involve some additional concealment that creates further

distance between the plagiarizing text and its source. These disguised forms are the most difficult forms of plagiarism to detect. Readers of the volume will become acquainted with the subtler forms of plagiarism that corrupt the production and dissemination of knowledge in humanities fields. The book is valuable not only to those interested in research ethics, but also to those in humanities fields including philosophy, theology, and history.

AS Core Studies and Psychological Investigations
Morgan & Claypool Publishers

This text offers a presentation of the mathematics required to tackle problems in economic analysis. After a review of the fundamentals of sets, numbers, and functions, it covers limits and continuity, the calculus of functions of one variable, linear algebra, multivariate calculus, and dynamics.

With Heinemann Secondary contributions from This Brief reviews scholars and experts the past, present, involved in the and future use of Fisher case, this school corporal edited volume punishment in the documents and shares United States, a lessons learned from practice that the collaborative remains legal in 19

states as it is constitutionally permitted according to the U.S. Supreme Court. As a result of school corporal punishment, nearly 200,000 children are paddled in schools each year. Most Americans are unaware of this fact or the physical injuries sustained by countless school children who are hit with objects by school personnel in the name of discipline. Therefore, Corporal Punishment in U.S. Public Schools begins by summarizing the legal basis for school corporal punishment and trends in Americans' attitudes about it. It then presents

trends in the use of school corporal punishment in the United States over time to establish its past and current prevalence. It then discusses what is known about the effects of school corporal punishment on children, though with so little research on this topic, much of the relevant literature is focused on parents' use of corporal punishment with their children. It also provides results from a policy analysis that examines the effect of state-level school corporal punishment bans on trends in juvenile crime. It concludes by discussing potential

legal, policy, and advocacy avenues for abolition of school corporal punishment at the state and federal levels as well as summarizing how school corporal punishment is being used and what its potential implications are for thousands of individual students and for the society at large. As school corporal punishment becomes more and more regulated at the state level, *Corporal Punishment in U.S. Public Schools* serves an essential guide for policymakers and advocates across the country as well as for researchers, scientist-practitioners, and graduate students.

Treatment for Hoarding Disorder Oxford University Press, USA
Crowdsourced Data Management: Industry and Academic Perspectives aims to narrow the gap between academics and practitioners in this burgeoning field. It simultaneously introduces academics to real problems that practitioners encounter every day, and provides a survey of the state of the art for practitioners to incorporate into their designs.

Markets and Market Failure Springer
With its closely aligned content and structure, this textbook will equip your students for the refreshed OCR A-level and AS Economics specifications. - All new practice questions at the end of each

chapter, featuring multiple choice, stimulus and essay questions - New knowledge check question feature, testing student understanding throughout - New case studies, facts and figures and practical exercises reflecting recent economic developments - Charts and graphs to give students a strong grounding in economic theory and strengthen their skills in applying those concepts at A-level - Manageable learning objectives matched to the specification and summaries of the key findings at the end to encourage students to take control of their study We are seeking endorsement from OCR for the Student Textbook and Student eTextbook.

OCR Chemistry Open Book Publishers
A guide for using computational text analysis to learn about the social world From social media posts and text messages to digital government documents and

archives, researchers are bombarded with a deluge of text reflecting the social world. This textual data gives unprecedented insights into fundamental questions in the social sciences, humanities, and industry. Meanwhile new machine learning tools are rapidly transforming the way science and business are conducted. Text as Data shows how to combine new sources of data, machine learning tools, and social science research design to develop and

evaluate new insights. Text as Data is organized around the core tasks in research projects using text—representation, discovery, measurement, prediction, and causal inference. The authors offer a sequential, iterative, and inductive approach to research design. Each research task is presented complete with real-world applications, example methods, and a distinct style of task-focused research. Bridging many divides—computer science and social science, the

Critical Thinking and Problem Solving

Springer Nature
Children are already learning at birth, and they develop and learn at a rapid pace in their early years.

This provides a critical foundation for lifelong progress, and the adults who provide for the care and the education of young children bear a great responsibility for their health, development, and learning. Despite the fact that they share the same objective - to

nurture young children and secure their future success - the various practitioners who contribute to the care and the education of children from birth through age 8 are not acknowledged as a workforce unified by the common knowledge and competencies needed to do their jobs well. Transforming the Workforce for Children Birth Through Age 8 explores the science of child development, particularly looking at implications for the professionals

who work with children. This report examines the current capacities and practices of the workforce, the settings in which they work, the policies and infrastructure that set qualifications and provide professional learning, and the government agencies and other funders who support and oversee these systems. This book then makes recommendations to improve the quality of professional practice and the practice environment for care and education professionals.

These detailed recommendations create a blueprint for action that builds on a unifying foundation of child development and early learning, shared knowledge and competencies for care and education professionals, and principles for effective professional learning. Young children thrive and learn best when they have secure, positive relationships with adults who are knowledgeable about how to support their development and learning and

are responsive to their individual progress. Transforming the Workforce for Children Birth Through Age 8 offers guidance on system changes to improve the quality of professional practice, specific actions to improve professional learning systems and workforce development, and research to continue to build the knowledge base in ways that will directly advance and inform future actions. The recommendations of this book provide an opportunity to improve the quality

of the care and the
education that
children receive,
and ultimately
improve outcomes
for children.
