Context Hodder Education

Positive Psychology emerged at the beginning of the new millennium as a movement within psychology aimed at enhancing human strengths such as creativity, joy, flow, responsibility, and optimal performance and achievement. Most study of human behaviour has focused mainly on what goes wrong in human affairs: aggression, mental disease, failure, and so on. While it is essential to study and contain such pathologies, it is equally important to understand those aspects of human experience that make life worth living. Positive psychologists seek “to find and nurture genius and talent” and “to make normal life more fulfilling”, rather than merely treating mental illness. Positive psychology is primarily concerned with using psychological theory, research and intervention techniques to understand the positive, adaptive, creative and emotionally fulfilling aspects of human behaviour. The “positive” branch complements, with no intention to replace or ignore, the traditional areas of psychology. By adding an important emphasis to use the scientific method to study and determine positive human development, this area of psychology fits well with the investigation of how human development can falter. Using strategies from positive psychology, teachers, coaches, therapists and employers can motivate others and help individuals understand and develop their personal strengths. It is expected that the book will provide a fund of rich experiences to the students and teachers. Contents: • Cognitive Strategies: Algorithms and Heuristics • Decision-Making • Creative Thinking and Problem-Solving • Language and Thought • Historical Antecedents of Motivation from Mechanism to Cognition • Cognitive Bases of Motivation: Intrinsic Motivation, Attribution, Competence • Measurement of Motives: Issues and Techniques • Cross-Cultural Perspectives of Motivation: Achievement, Aggression • Components of Emotion: Physiological, Expressive and Cognitive • Neural Mechanism of Emotion: Central and Peripheral • Stress and Coping: Reactions to Stress, Outcomes of Stress • Theories of Intelligence: Cattell, Jensen, Sternberg Goleman • Creativity: Views of Torrance, Getzels, Guilford

The UK Economy in a Global Context Hachette UK

OCR Psychology, Third Edition, is endorsed by OCR for use with the OCR AS Psychology specification. This book prepares students for all elements of the OCR Psychology AS exam. It covers both research methods and core studies, giving the who, what, where, and even the why of each study. It also looks at some of the work that followed the studies. Key features of the book include: 'Psychological Investigations': the first chapter of the book helps students to understand research methods in psychology – useful support for the Psychological Investigations exam and for understanding the core studies themselves. Core Studies: each study is described first ‘In a Nutshell’, followed by a detailed account of the aims, method, results and conclusions. Guidance is given on how each study can be evaluated and a wealth of extra materials is provided for each study – questions to assess understanding, practical activities, multiple choice and exam-style questions, further reading and video links. Background to each core study is included in the ‘Starters’ and ‘Afters’ features: information about related research before and after the study; and biographical details of the researcher(s). Approaches, perspectives, issues and methods are considered in a brand-new chapter to cover the themes of the course and prepare students for the long-answer questions on the Core Studies exam. Exam guidance: each chapter ends with short- and long-answer exam-style questions answered by students with teacher feedback. The book is presented in colourful and well-structured magazine-style spreads to aid the learning process. This 3rd edition has been completely revised, and is now accompanied by a companion website featuring an extensive range of online resources for both teachers and students, including answers to the questions posed in the book, glossary flash-cards, and multiple-choice test banks.

OCR A2 Economics Student Unit Guide New Edition: Unit F585 The Global Economy Hodder Education

OCR Food and Nutrition for GCSE: Home Economics Cambridge University Press

For more than half a century the developed world has been chasing productivity. It's financed our wealth but that part of output on which our continued prosperity depends - productivity growth - is petering out. The traditional scapegoat has been the dearth of worker skills. But the worker skills base has never been higher! The other explanation is that it is managers who are not giving full value to their employers. The way they're making decisions is conferring virtually no upside potential, which means they're leaving us wide open for experience-poor competitors to step into our experience-rich shoes. Exactly as Japan did in the 1960s and the so-called BRICK countries - Brazil, Russia, India, China (especially China) and

Korea - are threatening now. If creeping uncompetitiveness is not to overtake us, from where are the next round of productivity gains to come from? Identifying some gaping holes in the way managers are taught to manage, this book outlines both the size of the problem and a solution. Businesses and other organizations, the author says, have to substantially raise the quality of their decision-making. For this to happen, they need to be much better experiential learners. And for experiential learning to take place, companies and other institutions have to better manage their corporate DNA, the institution-specific experiences otherwise known as Organizational Memory. OM, which characterizes any organization's ability to perform, is the single biggest influence on decision-making excellence. It is a factor of production that has already been paid for at great expense, yet is readily discarded in the backwash of the biggest change in workplace practice for more than a century - the actively-encouraged flexible labour market. Corporate DNA explains why this key component of intellectual capital should be better managed, can be better managed and, particularly, how it can be used to help organizations reduce the pandemic of repeated mistakes, rei

Heinemann Economics for OCR Hodder Education

What does pleasure have to do with morality? What role, if any, should intuition have in the formation of moral theory? If something is 'simulated', can it be immoral? This accessible and wide-ranging textbook explores these questions and many more. Key ideas in the fields of normative ethics, metaethics and applied ethics are explained rigorously and systematically, with a vivid writing style that enlivens the topics with energy and wit. Individual theories are discussed in detail in the first part of the book, before these positions are applied to a wide range of contemporary situations including business ethics, sexual ethics, and the acceptability of eating animals. A wealth of real-life examples, set out with depth and care, illuminate the complexities of different ethical approaches while conveying their modern-day relevance. This concise and highly engaging resource is tailored to the Ethics components of AQA Philosophy and OCR Religious Studies, with a clear and practical layout that includes end-of-chapter summaries, key terms, and common mistakes to avoid. It should also be of practical use for those teaching Philosophy as part of the International Baccalaureate. Ethics for A-Level is of particular value to students and teachers, but Fisher and Dimmock's precise and scholarly approach will appeal to anyone seeking a rigorous and lively introduction to the challenging subject of ethics. Tailored to the Ethics components of AQA Philosophy and OCR Religious Studies.
