OCR GCSE (9-1) Business, Third Edition Philip Allan
This book provides core knowledge and guidance for successful teaching in Business, Economics and Enterprise Education, and is based on the most up-to-date requirements. Written by experts with expertise in delivering business education in teacher training, further education, and secondary schools, it explores the nature of each subject in relation to the curriculum and offers subject-specific pedagogy

to help develop teaching skills and confidence within the classroom. Including case studies and reflective questions in every chapter, the book covers the key topics across the subjects such as: Financial literacy Planning for the delivery of academic and vocational subjects The value of different qualifications and business and industry links Strategies for successful differentiation Assessment and pupil progression Teaching Business, Economics and Enterprise 14-19 is a vital resource for training or newly qualified teachers looking to deliver

excellent teaching that will inspire their students and lead to successful learning. OCR A Level Economics Book 1 Kenneth Copeland Publications OCR Psychology, Third Edition, is endorsed by OCR for use with the OCR AS Psychology specification. This book prepares students for all elements of the OCR Psychology AS exam. It covers both research methods and core studies, giving the who, what, where, and even the why of each study. It also looks at some of the work that followed the studies. Key features of the book

include: 'Psychological Investigations': the first chapter of the book helps students to understand research methods in psychology – useful support for the Psychological Investigations exam and for understanding the core studies themselves. Core Studies: each study is described first 'In a Nutshell', followed by a detailed account of the aims, method, results and conclusions. Guidance is given on how each study can be evaluated and a wealth of extra materials is provided for each study – questions to

assess understanding, practical activities, multiple choice and exam-style questions, further reading and video links. Background to each core study is included in the 'Starters' and 'Afters' features: information about related research before and after the study; and biographical details of the researcher(s). Approaches, perspectives, issues and methods are considered in a brand-new chapter to cover the themes of the course and prepare students for the long-answer questions on the Core Studies exam. Exam guidance:

each chapter ends with short- and long-answer exam-style questions answered by students with teacher feedback. The book is presented in colourful and well-structured magazine-style spreads to aid the learning process. This 3rd edition has been completely revised, and is now accompanied by a companion website featuring an extensive range of online resources for both teachers and students, including answers to the questions posed in the book, glossary flash-cards, and multiple-choice test banks. Positive
Psychology
emerged at the

beginning of the
new millennium as
a movement within
psychology aimed
at enhancing
human strengths
such as creativity,
joy, flow,
responsibility, and
optimal
performance and
achievement. Most
study of human
behaviour has
focused mainly on
what goes wrong in
human affairs:
aggression, mental
disease, failure, and
so on. While it is
essential to study
and contain such
pathologies, it is
equally important
to understand those
aspects of human
experience that
make life worth

living. Positive psychologists seek “ to find and nurture genius and talent ” and “ to make normal life more fulfilling ” , rather than merely treating mental illness. Positive psychology is primarily concerned with using psychological theory, research and intervention techniques to understand the positive, adaptive, creative and emotionally fulfilling aspects of human behaviour. The “ positive ” branch complements, with no intention to replace or ignore,

the traditional areas of psychology. By adding an important emphasis to use the scientific method to study and determine positive human development, this area of psychology fits well with the investigation of how human development can falter. Using strategies from positive psychology, teachers, coaches, therapists and employers can motivate others and help individuals understand and develop their personal strengths. It is expected that the book will

provide a fund of rich experiences to the students and teachers. Contents:

- Cognitive Strategies: Algorithms and Heuristics
- Decision-Making
- Creative Thinking and Problem – Solving
- Language and Thought
- Historical Antecedents of Motivation from Mechanism to Cognition
- Cognitive Bases of Motivation: Intrinsic Motivation, Attribution, Competence
- Measurement of Motives: Issues and Techniques

Cross-Cultural Perspectives of Motivation: Achievement, Aggression • Components of Emotion: Physiological, Expressive and Cognitive • Neural Mechanism of Emotion: Central and Peripheral • Stress and Coping: Reactions to Stress, Outcomes of Stress • Theories of Intelligence: Cattell, Jensen, Sternberg Goleman • Creativity: Views of Torrance, Getzels, Guilford

Hodder Education
For more than half a century the developed world has been chasing productivity. It's financed our wealth but that part of output on which our continued prosperity depends - productivity growth - is petering out. The traditional scapegoat has been the dearth of worker skills. But

the worker skills base has never been higher! The other explanation is that it is managers who are not giving full value to their employers. The way they're making decisions is conferring virtually no upside potential, which means they're leaving us wide open for experience-poor competitors to step into our experience-rich shoes. Exactly as Japan did in the 1960s and the so-called BRICK countries - Brazil, Russia, India, China (especially China) and Korea - are threatening now. If creeping uncompetitiveness is not to overtake us, from where are the next round of productivity gains to come from? Identifying some gaping holes in the way managers are taught to manage, this book outlines both the size of the problem and a solution. Businesses and other organizations, the author says, have to substantially raise the quality of their decision-making. For this to happen, they need to be much better experiential learners. And for experiential learning to take place, companies and other institutions have to better manage their corporate DNA, the institution-specific experiences otherwise known as Organizational Memory. OM, which characterizes any organization's ability to perform, is the single biggest influence on decision-making excellence. It is a factor of production that has already been paid for at great expense, yet is readily discarded in the backwash of the biggest change in workplace practice for more than a century - the actively-

encouraged flexible
labour market.
