Metamorphosis brings astonishing and exciting changes to a pair of caterpillar friends, who take pride in being the same--and different. Two caterpillar friends love what they have in common--lots of legs and a talent for chewing leaves into funny shapes. And when it's time to build cocoons, they hang theirs side by side. "Happy metamorphosis," says an older, more knowledgeable butterfly. And it is a happy metamorphosis indeed--for when the two emerge from their cocoons, they can fly! But so much else has changed--as one is now a moth, who flies by night, and the other is a butterfly, who flies by day. How will things work now? Fortunately some things never change--like true friends figuring out a way to be together, and happily flying into the sunset and sunrise.

### **Butterflies and Moths** Penguin

In this little book I want to tell you something about the common butterflies and moths which you may find in almost all parts of the country. But, first of all, I think that perhaps I had better say something about what we generally call their "life-history." Of course you know that butterflies and moths are not butterflies and moths to begin with. They enter the world in the form of eggs, just as birds and fishes do. These eggs are often very beautiful indeed. You may find them on the leaves of different plants, sometimes on the upper side and sometimes on the lower side. And if you look at them through a good strong magnifying-glass - or, better still, through a microscope - you will find that some are shaped like little sugar-loaves, and some like acorns, and some

---

like tiny melons, while they are nearly always covered with raised patterns which one might almost think must have been cut by fairy chisels. In course of time these eggs hatch, and out come a number of little caterpillars, which at once begin to eat the leaves of the plant on which the eggs were laid.

The Humane Gardener fills a unique niche in describing simple principles for both attracting wildlife and peacefully resolving conflicts with all the creatures that share our world.
