Macrophotography allows for the capture of small photographic subjects in life size or larger magnification, allowing viewers to experience the world around them in a way that is simple not possible with the naked eye. With a magnified view, we can see the distinctive make-up of an insect, animal, or flower—its texture, details, and subject features that we might otherwise be completely unaware of. In this unique book, Dennis Quin turns his macro lenses upon the natural world and teaches readers to choose and use the

tools they need to capture magical images of all manner of bugs, flowers, reptiles, and more. In each of the 60 sections in this beautifully illustrated book, Quin details the tricks of the trade. You'll learn where to find your subjects, how to make sure that the background adds to the overall impact of the image, how to track insects in flight, and other skills that will increase your odds of capturing technically strong, visually rewarding shots. In each section, you'll see 1 to 3 images of a unique subject and will get detailed instruction as to how Quin shot the image—including the equipment used, settings chosen, the camera angle, and more. Common among moths is a mate-finding system in which females emit a pheromone that induces males to fly upwind along the pheromone plume. Since the chemical pheromone of the domesticated silk moth was identified in 1959, a steady increase in the number of

moth species whose pheromone attractants have been identified now results in a rich base for review and synthesis. Pheromone Communication in Moths summarizes moth pheromone biology, covering the chemical structures used by the various lineages, signal production and perception, the genetic control of moth pheromone traits, interactions of pheromones with host-plant volatiles, pheromone dispersal and orientation, male pheromones and courtship, and the evolutionary forces that have likely shaped pheromone signals and their role in sexual selection. Also included are chapters on practical applications in the control and monitoring of pest species as well as case studies that address pheromone systems in a number of species and groups of closely allied species. Pheromone Communication in Moths is an invaluable resource for entomologists, chemical ecologists, pest-management scientists, and professionals who study pheromone communication and pest management.

"She died," Chessie said. "She died, rose, and nearly died again. She comes. The crows know her – the crows guide her. She follows the sound of a crying child. She follows the drag of un-kept promises on her heart." – Chessie – Hallowed Ground "They came in the night with their creak-wheeled wagons and patchwork tents, rolling down through the gulch and up the other side to pitch camp. In Rookwood, they called it 'Dead man's Gulch,' and in Rookwood, names were important. If you walked too far through that God-forsaken, dust-drowned ditch, you were bound to drag your boots through bones. If you felt something sharp dig into your heel, it could be a tooth taking a last bite of something hot and living. The Deacon stood in silent shadows watching their progress, occasionally glancing up into the pale, inadequate light of the waning moon." When a man known only as The Deacon set up camp outside Rookwood, a murder

of crows took to unnatural, moonlit flight. The crows came to Rookwood; trouble soon to follow. Things were already strange in that God-forsaken town, but no one could have predicted the forces and fates about to meet in a dust-bowl clearing in the desert. A Preacher. A Demon. An Angel. A Gunslinger. A bargain with the darkness was signed in blood, and broken, and as such deals usually do, it went south. Now the fate of lost lovers, faith healers, ancient Gods and the Devil himself collide in a circle of wagons tended by the damaged and deformed, the saved and the shorn. There's a power come to Rookwood, and this one-horse town is about to be transformed. Such deals are only made and broken...on

Hallowed Ground. From Steven Savile, International bestselling author of *Silver*, *The Last Angel*, and *The Sufferer's Song*, and David Niall Wilson, Bram Stoker Award-winner David Niall Wilson, author of *Deep Blue*, *This is My Blood*, & *Heart of a Dragon*, comes a tale of the old west, magic, enlightenment and damnation readers have said is like Stephen King's *The Gunslinger* meets Daniel Knauf's *Carnivale*

Author's Introduction to the 2014 Edition This is not a typical western. If you are looking for a lot of gunfights, tobacco spitting, and cattle rustling, this is the wrong book. What we set out to do in

Hallowed Ground is to create a layered, complex fantasy set against a backdrop of the old west. You have your snake-oil salesman, your gunslinger, young lovers, wandering characters you'll no doubt recognize from mythology, or legend, integrated into a single novel. No one in Hallowed Ground is exactly who, or what, they seem. You have to keep up with the varied storylines – they all meet in the end, and they are all important. You'll meet Lilith, and the fates, angels and devils, and though each will have an air of familiarity, they aren't exactly as you'll find them anywhere else. We are hoping to carry this on into a series – we have tentatively outlined a book based on Sam Hill – as in the saying, "What in the Sam Hill?" – explaining some of the legend and fact behind the phrase, and drawing our characters into yet another strange, surreal adventure. We hope you'll enjoy this book, and if you do, we hope you'll leave us a comment, or a review.

This book summarises decades of research and collation of distributional data. From the tiny Freyeria trochylus (Grass Jewel), Europe's smallest butterfly, to the magnificent, newly arrived Papilio demoleus (Lime Swallowtail), this comprehensively illustrated reference book and field guide includes all butterfly species known in Cyprus over the past 100 years. Where applicable, reference is made to subspecies of related taxa present in nearby countries of the eastern Mediterranean. The images on the cover represent the island's seven endemics, discussed in depth. Included, too, are detailed distribution maps representing records garnered from almost 300 recorders/sources (particularly members of the Cyprus Butterfly Study Group), over a period of

more than 20 years.

The literature is still one of our biggest frustrations today. There is, in one sense, too much of it, and in another not enough - for there are insufficient and inadequate published guidelines through this jungle. Last year two excellent books for students of ecological chemistry were published, one in France and one in England. The concordance of the references was a mere overall 3% rising to 7% in the chapters on pheromones. Even in the computer age, the channel remains a formidable barrier to the rapid exchange of biological information. At the present time we are in urgent need of compilations similar to John Feltwell's "The Large White Butterfly"; since the literature has become virtually unmanageable. This insect is now a demonstration object in the sixth form schoolroom; an experimental "rabbit" in the University laboratory; a test animal in virus and bacterial research projects; a tool for the study of flight mechanisms, migration, plant biochemistry, hormones, genetics, allergies, pigments, mimicry,

etc. , etc. John Feltwell has, by this massive compilation, rendered us a great service - in fact he has given us a present of 4,000 hours of library time spent in 50 different libraries in seven countries. In the process he has collected 8000 references to the Large White. Of these, 4000 have been selected, and we are given a brief indication of their contents.

Pedigo and Rice expertly combine basic and applied entomology in this reader-friendly, pedagogically rich text. Assuming only a background in elementary biology, the authors present the major elements of general entomology before moving on to concepts in insect biology and ecology necessary for understanding insect pest management.

Both theory and practice are emphasized as readers explore pertinent topics. The authors discuss pest-management issues—both preventive and curative—as

aspects of applied ecology, with solutions considering environmental quality, profitability, and durability. Insect diagnostic boxes with detailed information on distribution, importance, appearance, and life cycles of particular species and groups appear throughout the text. Readers will come away with a comprehensive introduction to applied, sustainable pest management appropriate for whatever commodities they must handle.
