It should be remembered that government organizations, like their business counterparts, have distinct life cycles. During their lives, public organizations generally go through four phases: growth, stability, retrenchment, and revitalization. Different political and management strategies are needed to set the course and properly guide an organization through each phase of its development. Strategy is concerned with defining purposes and developing goals and plans for an organization's future direction and growth. While some cities, particularly those in suburban areas with an expanding tax base, are in the growth or stability phase of their life cycle, many others have entered the retrenchment or revitalization phase of their development. Sound budget reduction strategies will assist public officials in this latter category as they debate and adopt policies that ultimately lead to the financial self-help and renewal necessary for the future.

### **Primary Care for Older Adults**

This book provides a comprehensive and systematic state-of-the science review of major primary care delivery models, how they address specific needs of older adults, and available evidence for their efficacy. Written by experts in the field, this book explores the patient-centered medical home model (PCMH) in depth and dives into the complexities of the "medical neighborhood". It describes and analyzes primary care specifically directed toward special, complex populations, such as the Health Home for safety net patients with mental health needs, and intensive primary care for older adults. It reviews an array of primary care models related to dual eligible patients including the GRACE primary care consultation model and PACE models. It describes primary care with Advanced Practice Nurses and Physician Assistants and explores in-depth the massive effort within the VA to develop the Patient Activated Care Team (PACT), a VA form of the PCMH that also has several offshoots that address complex older veterans and veterans with severe mental illness. Finally, it illuminates rarely discussed primary care that occurs within the home and within long-term care. Throughout the entire book, experts navigate the workforce, care quality, and financing challenges of primary care for older adults. Primary Care for Older Adults is a valuable resource for clinicians, researchers, patients, caregivers and their advocates, and policy makers who have an interest in designing, promoting, and implementing high quality primary care for older adults.

New York Times Bestseller • Finalist for the 2018 National Book Critics Circle Award in Nonfiction • A New York Times Notable Book • Bloomberg Best Book of 2018 • One of Bill Gates's Top Five Books of All Time "Their distinctive contribution to the higher-education debate is to meet safetyism on its own, psychological turf . . . Lukianoff and Haidt tell us that safetyism undermines the freedom of inquiry and speech that are indispensable to universities." —Jonathan Marks, Commentary "The remedies the book outlines should be considered on college campuses, among parents of current and future students, and by anyone longing for a more sane society." —Pittsburgh Post-Gazette Something has been going wrong on many college campuses in the last few years. Speakers are shouted down. Students and professors say they are walking on eggshells and are afraid to speak honestly. Rates of anxiety, depression, and suicide are rising—on campus as well as nationally. How did this happen? First Amendment expert Greg Lukianoff and social psychologist Jonathan Haidt, author of *The Anxious Generation*, show how the new problems on campus have their origins in three terrible ideas that have become increasingly woven into American childhood and education: What doesn't kill you makes you weaker; always trust your feelings; and life is a battle between good people and evil people. These three Great Untruths contradict basic psychological principles about well-being and ancient wisdom from many cultures.

Embracing these untruths—and the resulting culture of safetyism—interferes with young people's social, emotional, and intellectual development. It makes it harder for them to become autonomous adults who are able to navigate the bumpy road of life. Lukianoff and

Haidt investigate the many social trends that have intersected to promote the spread of these untruths. They explore changes in childhood such as the rise of fearful parenting, the decline of unsupervised, child-directed play, and the new world of social media that has engulfed teenagers in the last decade. They examine changes on campus, including the corporatization of universities and the emergence of new ideas about identity and justice. They situate the conflicts on campus within the context of America's rapidly rising political polarization and dysfunction. This is a book for anyone who is confused by what is happening on college campuses today, or has children, or is concerned about the growing inability of Americans to live, work, and cooperate across party lines.

This User's Guide is intended to support the design, implementation, analysis, interpretation, and quality evaluation of registries created to increase understanding of patient outcomes. For the purposes of this guide, a patient registry is an organized system that uses observational study methods to collect uniform data (clinical and other) to evaluate specified outcomes for a population defined by a particular disease, condition, or exposure, and that serves one or more predetermined scientific, clinical, or policy purposes. A registry database is a file (or files) derived from the registry. Although registries can serve many purposes, this guide focuses on registries created for one or more of the following purposes: to describe the natural history of disease, to determine clinical effectiveness or cost-effectiveness of health care products and services, to measure or monitor safety and harm, and/or to measure quality of care. Registries are classified according to how their populations are defined. For example, product registries include patients who have been exposed to biopharmaceutical products or medical devices. Health services registries consist of patients who have had a common procedure, clinical encounter, or hospitalization. Disease or condition registries are defined by patients having the same diagnosis, such as cystic fibrosis or heart failure. The User's Guide was created by researchers affiliated with AHRQ's Effective Health Care Program, particularly those who participated in AHRQ's DEcIDE (Developing Evidence to Inform Decisions About Effectiveness) program. Chapters were subject to multiple internal and external independent reviews.
