For fans of the New York Times bestseller *I Quit Sugar* or Katie Couric's controversial food industry documentary *Fed Up*, *A Year of No Sugar* is a "delightfully readable account of how [one family] survived a yearlong sugar-free diet and lived to tell the tale...A funny, intelligent, and informative memoir." —Kirkus
It's dinnertime. Do you know where your sugar is coming from? Most likely everywhere. Sure, it's in ice cream and cookies, but what scared Eve O. Schaub was the secret world of sugar—hidden in bacon, crackers, salad dressing, pasta sauce, chicken broth, and baby food. With her eyes opened by the work of obesity expert Dr. Robert Lustig and others, Eve challenged her husband and two school-age daughters to join her on

a quest to quit sugar for an entire year. Along the way, Eve uncovered the real costs of our sugar-heavy American diet—including diabetes, obesity, and increased incidences of health problems such as heart disease and cancer. The stories, tips, and recipes she shares throw fresh light on questionable nutritional advice we've been following for years and show that it is possible to eat at restaurants and go grocery shopping—with less and even no added sugar. *Year of No Sugar* is what the conversation about "kicking the sugar addiction" looks like for a real American family—a roller coaster of unexpected discoveries and challenges. "As an outspoken advocate for healthy eating, I found Schaub's book to shine a much-needed spotlight on an aspect of American culture that is making us sick, fat, and unhappy, and it does so with wit and warmth."—Suvir Sara, author of *Indian Home Cooking*
"Delicious and compelling, her book is just about the best sugar substitute I've ever encountered."—Pulitzer Prize-winning author Ron Powers

The Solution Bella Books

Technological systems become organized by commands from outside, as when human intentions lead to the building of structures or machines. But many natural systems become structured by their own internal processes: these are the self-organizing systems, and the emergence of order within them is a complex phenomenon that intrigues scientists from all disciplines. Unfortunately, complexity is ill-defined. Global explanatory constructs,

such as cybernetics or general systems theory, which were intended to cope with complexity, produced instead a grandiosity that has now, mercifully, run its course and died. Most of us have become wary of proposals for an "integrated, systems approach" to complex matters; yet we must come to grips with complexity somehow. Now is a good time to reexamine complex systems to determine whether or not various scientific specialties can discover common principles or properties in them. If they do, then a fresh, multidisciplinary attack on the difficulties would be a valid scientific task. Believing that complexity is a proper scientific issue, and that self-organizing systems are the foremost example, R. Tomovic, Z. Damjanovic, and I arranged a conference (August 26-September 1, 1979) in Dubrovnik, Yugoslavia, to address self-organizing systems. We invited 30 participants from seven countries. Included were biologists, geologists, physicists, chemists, mathematicians, biophysicists, and control engineers. Participants were asked not to bring manuscripts, but, rather, to present positions on an assigned topic. Any writing would be done after the conference, when the writers could benefit from their experiences there.
