Now, more than 20 years since its initial release, John Fiske's classic text *Power Plays Power Works* remains both timely and insightful as a theoretically driven examination of the terrain where the politics of culture and the culture of politics collide. Drawing on a diverse set of cultural sites - from alternative talk radio forums, museums, celebrity fandom, to social problems such as homelessness - Fiske traverses the topography of the American cultural landscape to highlight the ways that ordinary people creatively construct their social identities and relationships through the use of the resources available to them, while constrained by social conditions not of their own choosing. This important analysis provides a set of critical methodological and analytical tools to grapple with the complexities and struggles of contemporary social life. A new introductory essay by former Fiske student Black Hawk Hancock entitled 'Learning How to Fiske: Theorizing Power, Knowledge, and Bodies in the 21st Century' elucidates Fiske's methods for today's students, providing them with the ultimate guide to thinking and analyzing like John Fiske; the art of 'Learning How to Fiske'.

This is one of the most significant military books of the twentieth century. By an outstanding soldier of independent mind, it pushed forward the evolution of land warfare and was directly responsible for German armoured supremacy in the early years of the Second World War. Published in 1937, the result of 15 years of careful study since his days on the German General Staff in the First World War, Guderian's book argued, quite clearly, how vital the proper use of tanks and supporting armoured vehicles would be in the conduct of a future war. When that war came, just two years later, he proved it, leading his Panzers with distinction in the Polish, French and Russian campaigns. Panzer warfare had come of age, exactly as he had forecast. This first English translation of Heinz Guderian's classic book - used as a textbook by Panzer officers in the war - has an introduction and extensive background notes by the modern English historian Paul Harris.

Historical scholarship is currently undergoing a digital turn. All historians have experienced this change in one way or another, by writing on word processors, applying quantitative methods on digitalized source materials, or using internet resources and digital tools. Digital Histories showcases this emerging wave of digital history research. It presents work by historians who — on their own or through collaborations with e.g. information technology specialists — have uncovered new, empirical historical knowledge through digital and computational methods. The topics of the volume range from the medieval period to the present day, including various parts of Europe. The chapters apply an exemplary array of methods, such as digital metadata analysis, machine learning, network analysis, topic modelling, named entity recognition, collocation analysis, critical search, and text and data mining. The volume argues that digital history is entering a mature phase, digital history 'in action', where its focus is shifting from the building of resources towards the making of new historical knowledge. This also involves novel challenges that digital methods

pose to historical research, including awareness of the pitfalls and limitations of the digital tools and the necessity of new forms of digital source criticisms. Through its combination of empirical, conceptual and contextual studies, Digital Histories is a timely and pioneering contribution taking stock of how digital research currently advances historical scholarship.

Jürgen Habermas is one of the best-known and most influential philosophers in Europe today. Heir to the Frankfurt school, his reputation rests on more than thirty years of groundbreaking works on society knowledge, history, technology; ethics, and many other subjects. He is also a familiar figure in his native Germany where he has often played a prominent role in public debates. In recent years, he has spoken out ever more directly on the extraordinary changes taking place in Germany, Europe, and the world. This volume of interviews reveals Habermas's passionate engagement with contemporary issues. Wide-ranging and informal, the interviews focus on matters of decisive importance to Germany and the rest of the world in the 1990s: German unification; recent explosive debates about interpretations of German history, Germany's asylum policies, and the Nazi era; efforts to create a cooperative, peaceful Europe; and the significance of the Persian Gulf War. A final interview focuses on the relation between theory and practice?between philosophy and the so-called real world. In an afterword to the volume, Habermas addresses a broad spectrum of issues facing Germany and other nations in this final decade of the century. Aply translated and annotated by Max Pensky, professor of philosophy at the State University of New York-Binghamton, *The Past as Future* provides a striking portrait of an intellectual who is equally at home in the world of academic philosophy and in mainstream debate?and who can make valuable connections between the two.

Across the world, the demands placed on health systems are growing rapidly. Developed countries face the challenge of providing services to an ageing population with changing health needs, while countries with developing health systems must find ways of ensuring their populations are provided with access to healthcare. Innovative thinking is essential to meet these twin challenges, but innovation is both a cause and cure of many struggles in healthcare — we need it, but it is hard to manage and the introduction of new technology can lead to higher costs. Using real-life examples and case studies from around the world, this book introduces the latest thinking on understanding and managing healthcare innovation more effectively. It does this from the perspective of governments responsible for shaping health policy, healthcare organisations providing services and juggling competing demands, and from the perspective of the industries that supply the new drugs, devices and other technologies. Managing Innovation in Healthcare is the perfect accompaniment for MSc, PhD and MBA students on health policy, management and public health courses, as well as managers, consultants and policy makers involved in healthcare services in both the public and private sector.
