In today's modern dental practice, the patient's role has changed--from petitioner seeking pain relief to client requesting a wide range of services, including improved looks. Often the patient will decide between amalgam, gold, composite or ceramics as the material of choice for a posterior tooth restoration, or have a say in the processing method used for its fabrication! This lavishly

illustrated new volume in the prestigious Color Atlas of Dental Medicine Series explores the full scope of today's rapidly growing practice of aesthetic dentistry and its future evolution. You will find full coverage of the improved aesthetics and biocompatibility possible in new all-ceramic and metal-ceramic systems, plus details on inlay, onlay, and veneer processing methods. And you will benefit from the informed discussion of each technique and system, complete with the advantages and disadvantages of each. Special topics covered: Basic principles, indications, diagnostics, and treatment planning All background on composites-direct posterior restorations and composite inlays Aesthetics and function of direct anterior restorations The newest metal-ceramic and all-ceramic restorations, including clinical aspects of the all-ceramic crown and inlays Step-by-step bleaching techniques How to achieve maximum aesthetics with implants Complete with a chapter on state-of-the-art computer assisted systems for use in restorative dentistry, and the impact of aesthetic techniques on every dental subspecialty, this book is informative and current. It recognizes that today's practice has dramatically shifted from pain relief and functionality to a demand for excellent cosmetic results, and it will be a valued resource in every practitioner's office. Stay up-to-date in a rapidly evolving field; order your copy today!

The importance of copepods in aquaculture has long been recognized, especially in the larval rearing of many marine fishes. This timely publication provides a single source of information on copepod biology, culture methods and practical use in marine finfish hatcheries. Originating out of a workshop held on copepods by the Oceanic Institute in Hawaii, this proceedings includes review articles and papers presented by leading international experts in copepod biology and aquaculture. It is a seminal work that integrates the most up-to-date information on selecting copepod species, effects of algal species on reproduction, ways to increase production, the nutritional value of copepods, behavioral characteristics of copepods, potential use of copepod nauplii and eggs, and their application to larval rearing of various marine finfish species.
