In today's modern dental practice, the patient's role has changed--from petitioner seeking pain relief to client requesting a wide range of services, including improved looks. Often the patient will decide between amalgam, gold, composite or ceramics as the material of choice for a posterior tooth restoration, or have a say in the processing method used for its fabrication!

This lavishly illustrated new volume

in the prestigious Color Atlas of Dental Medicine Series explores the full scope of today's rapidly growing practice of aesthetic dentistry and its future evolution. You will find full coverage of the improved aesthetics and biocompatibility possible in new all-ceramic and metal-ceramic systems, plus details on in-lay, onlay, and veneer processing methods. And you will benefit from the informed discussion of each technique and system, complete with the advantages and disadvantages of each. Special topics covered: Basic principles, indications, diagnostics, and treatment planning All background on

composites-direct posterior restorations and composite inlays Aesthetics and function of direct anterior restorations The newest metal-ceramic and all-ceramic restorations, including clinical aspects of the all-ceramic crown and inlays Step-by-step bleaching techniques How to achieve maximum aesthetics with implants Complete with a chapter on state-of-the-art computer assisted systems for use in restorative dentistry, and the impact of aesthetic techniques on every dental subspecialty, this book is informative and current. It recognizes that today's practice has dramatically shifted from pain relief and functionality to a

demand for excellent cosmetic results, and it will be a valued resource in every practitioner's office. Stay up-to-date in a rapidly evolving field; order your copy today!

Sound & Vision

Shrinking pixel sizes along with improvements in image sensors, optics, and electronics have elevated DSCs to levels of performance that match, and have the potential to surpass, that of silver-halide film cameras. Image Sensors and Signal Processing for Digital Still Cameras captures the current state of DSC image acquisition and signal

processing technology and takes an all-inclusive look at the field, from the history of DSCs to future possibilities. The first chapter outlines the evolution of DSCs, their basic structure, and their major application classes. The next few chapters discuss high-quality optics that meet the requirements of better image sensors, the basic functions and performance parameters of image sensors, and detailed discussions of both CCD and CMOS image sensors. The book then discusses how color theory affects the uses of DSCs, presents basic image processing and camera

control algorithms and examples of advanced image processing algorithms, explores the architecture and required performance of signal processing engines, and explains how to evaluate image quality for each component described. The book closes with a look at future technologies and the challenges that must be overcome to realize them. With contributions from many active DSC experts, *Image Sensors and Image Processing for Digital Still Cameras* offers unparalleled real-world coverage and opens wide the door for future innovation.

Buying Guide

Nowadays, one of the main objectives of the fruit and vegetable industry is to develop innovative novel products with high quality, safety, and optimal nutritional characteristics in order to respond, with efficiency, to increasing consumer expectations.

Various unconventional technologies (e.g., pulsed electric field, pulsed light, ultrasound, high pressure, and microwave drying) have emerged and

enable the processing existing knowledge on of fruits and vegetables in a way that increases their stability while preserving their thermolabile nutrients, flavour, texture, and overall quality. Some of these technologies can also be used for waste and byproduct valorisation. The application of fast noninvasive methods for process control is of great importance for the fruit and vegetable industry. The following Special Issue "Safety, Quality, and Processing of Fruits and Vegetables" consists of 11 papers which represent a high-value contribution to the safety aspects, quality evaluation, and emerging processing technologies for fruits and vegetables.
