The irradiance pattern was measured for the propagation of a collimated beam of light underwater. A neodymium-doubled green laser was transmitted horizontally at a six foot depth in Lake Winnepesaukee, N.H. The irradiance was measured at distances from 0 to 100 feet and for off-axis angles from 0 to 58 degrees. The water had an attenuation length of 4.54 ft/ln and an absorption coefficient of 0.0446 ln/ft. The ratio of attenuation coefficient to absorption coefficient was 4.94. The fractional power contained within a cone of various angles was computed. At 20 attenuation lengths only 10% of the total power is contained within a cone of 4 degrees whereas at 4 attenuation lengths this same cone contains 50% of the power. (Author).

Recombinant proteins, produced in cells or microorganisms, play an important role in basic research, medical science and the biotechnology industry. Many foreign gene expression systems using mammalian cells, E. coli, insect cells, yeast and other organisms as hosts have been developed. However, only

recently has the expression system of *Schizosaccharomyces pombe* as a host become a subject of focus, as it is expected to be profitable for expressing foreign genes. The reason for this is that *S. pombe* is evolutionarily more advanced than other types of yeast. This book describes the use of *S. pombe* in basic research and industrial applications.

Jay Maisel has been hailed as one of the most brilliant and gifted photographers of all time. But he is also much more than that—he is a mentor, teacher, and trailblazer to many photographers, and a hero to those who feel Jay’s teaching has changed the way they see and create their own photography. He is a living legend whose work is studied around the world, and whose teaching style and presentation garner standing ovations and critical acclaim every time he takes the stage. In his first educational book, *Light, Gesture, and Color*, Jay put his amazing insights and learning moments from a lifetime behind the lens into a book that communicated the three most important aspects of street photography: light, gesture, and color. Here, in *It’s Not About the F-Stop*, Jay builds on that success to take you beyond the buttons and dials on your camera to continue to teach you how to “see” like a photographer, and how to capture

the world around you in a way that delights, intrigues, and challenges the viewer. Each page unveils something new and inspires you to rethink everything you know about the bigger picture of photography. This isn’t a book about f-stops or ISOs. It’s about seeing. And nobody communicates this, visually or through the written word, like Jay Maisel.
