This book may seem horribly
out of date since it spends
most of the time describing
how to adapt compact film
cameras for flight. This
includes building large

payload bays and methods of
mechanically and/or
electrically triggering the
cameras. It's being re-issued
because while the actual
payloads being lofted are
obsolete, the techniques of
building sturdy payload bays
for comparatively large, heavy
instruments and methods of
mechanically and/or
electrically triggering them is
still relevant. In fact, even
more so with the recent rise of
university-level programs
using rocketry as a teaching
tool
