decision to alter his father's last surviving suit for himself is the launching point for this powerful book - part personal memoir, part social history of the man's suit - about fathers and sons, love and forgiveness, and learning what it means to be a man. For years, journalist and amateur tailor JJ Lee tried to ignore the suit hanging at the back of his closet. It was his father's suit. But when JJ decides to make the suit his own, little does he know he is about to embark on a journey to understand his own past. As JJ cuts into the jacket, he begins to piece together the story of his relationship with his father, a charismatic but troubled Montreal restaurateur whose demons brought tumult upon his family. JJ also recounts his own ups and downs during the year he spent as an apprentice at Modernize Tailors - the last of the great Chinatown suitmakers in Vancouver - where, under the tutelage of his octogenarian master tailor, he learns invaluable lessons about life. Woven throughout JJ's tale are stories of the

suit's own evolution, illuminating how this humble garment has, for centuries, been the surprising battleground for the war between generations. Written with great wit, bracing honesty, and narrative verve, and featuring line drawings throughout by the author, *The Measure of a Man* is an unforgettable story of love, forgiveness, and discovering what it means to be your own man.

A History of Photography in 50 Cameras explores the 180-year story of perhaps the most widely used device ever built. It covers cameras in all forms, revealing the origins and development of each model and tracing the stories of the photographers who used and popularized them. Illustrated throughout with studio shots of all fifty cameras and a selection of iconic photographs made using them, it is the perfect companion guide for camera and photography enthusiasts alike.

The cameras include: The Nikon F, the "hockey puck" that saved photographer Don McCullin's life when it stopped a sniper's bullet during the Vietnam War. Its indestructibility, reliability and interchangeable lenses made it a favored workhorse of photojournalists. The Leica M3-D was also favored by war photographers, including David Duncan Douglas, who used the camera during his coverage of the Korean and Vietnam Wars. In 2012, one of his four customized Leica cameras sold at auction for nearly \$2 million. A Speed Graphic was used to take Sam Shere's widely published photograph of the 1937 Hindenburg disaster, "the world's most famous news photograph ever taken." With few shots left and no time to get the camera to his eye, he shot his Pulitzer Prize-winning image "literally from the hip. It was over so

fast there was nothing else to do." The camera phone has transformed picture-taking technology most profoundly since the invention of cameras. The "selfie" has become a new genre of photography practiced by everyone, and shared globally. This is an ideal book for camera collectors as well as anyone researching the history and art of photography.

Sometimes photographers have to shoot in less than ideal lighting situations. Maybe the wedding is mid-day in the middle of a field, or perhaps the event is in a florescent-lit room. These scenarios can be particularly intimidating for beginning photographers who don't know how to handle the many undesirable lighting situations they may encounter. In *Shooting in Sh*tty Light*, professional photographers Lindsay Adler and Erik Valind cover the top ten worst lighting situations and provide a variety of solutions for each. They explain which solutions are most practical and why one option might be preferable over another, examining such problems as extremely low lighting when no flash is allowed, strong backlight, and the light on an overcast day. Unlike other books that focus on natural light or lighting in general, this book addresses a very real need of beginning photographers, answering the question, "What do I do when the lighting is terrible?" Lindsay and Erik candidly show you the tools at your disposal, demonstrating the techniques essential to getting the job done with minimal fuss. Shows how to deal with ten of the worst lighting situations, such as harsh midday light, extremely low light, and mixed light. Offers real-life examples and practical solutions for handling poor light, such as identifying natural reflectors, bouncing light off a wall, or utilizing flash gels. Features a fun, conversational style to help you conquer the fear of poor lighting and approach any lighting situation with confidence!

U.S. Camera and Travel Photography on analog film has simply put received a recent renaissance. In our digital age, I guess a romantic veil surrounds the analog approach to photography. Even when shooting digital cameras, we do postprocessing to simulate the look of analog film. We talk about the specific and beloved look of certain films, and how their sensitivity and grain add a charm to the image. Delving deeper, a reason for the analog renaissance might be our growing desire to slow down; to immerse ourselves and sharpen our creative senses by restraining the means with which we photograph. Where the digital camera is soon so perfect that we as photographers can sometimes feel redundant, the analog camera requires our undivided presence. These cameras are

subject to the same limitations as they were in the dawn of photography. You must visualize what you want to create beforehand, and you cannot rely on an lcd to feed you the result. Thus, in analog photography we are forced to slow down, plan, create the right circumstances, and capture the wanted picture at the decisive moment.
