How Writing Came About University of Texas Press

An "utterly lucid, thoughtfully illustrated, and thoroughly convincing" book on the origins of the world's oldest known system of writing (American Journal of Archaeology). One of American Scientist's Top 100 Books on Science, 2001 In 1992, the University of Texas Press published Before Writing, Volume I: From Counting to Cuneiform and Before Writing, Volume II: A Catalog of Near Eastern Tokens. In these two volumes, Denise Schmandt-Besserat set forth her groundbreaking theory that the cuneiform script invented in the Near East in the late fourth millennium B.C.—the world's oldest known system of writing—derived from an archaic counting device. How Writing Came About draws material from both volumes of this scholarly work to present Schmandt-Besserat's theory in an abridged version for a wide public and classroom audience. Based on the analysis and interpretation of a selection of 8,000 tokens or counters from 116 sites in Iran, Iraq, the Levant, and Turkey, it documents the immediate precursor of the cuneiform script./DIV

H.G. Liddell and R. Scott's Greek-English  
Lexicon (revised and augmented by H.S. Jones

in 1940) has been the essential tool of advanced Greek scholars for 150 years; in order to update it a new Supplement has been published (OUP 1996) replacing that of 1968. In this provocative reconsideration both of its lexicographical principles and of individual articles, John Chadwick examines the need for further revision and expansion of the volume through a re-examination of the classical Greek vocabulary. A series of notes are presented, making important and stimulating contributions to the study of classical Greek lexicography, and offering many new interpretations of passages from familiar authors based upon a lexicographical approach. Essential reading for all scholars of classical Greek.
