Selection is a “stunning

achievement ” (Los Angeles Times). Kim Lord is an avant – garde figure, feminist icon, and agent provocateur in the L.A. art scene. Her groundbreaking new exhibition Still Lives is comprised of self – portraits depicting herself as famous, murdered women the Black Dahlia, Chandra Levy, Nicole Brown Simpson, among many others and the works are as compelling as they are disturbing, implicating a culture that is too accustomed to violence against women. As the city ’ s richest art patrons pour into the Rocque Museum ’ s opening night, all the staff, including editor Maggie Richter, hope the event will be enough to save the historic

institution ’ s flailing finances. Except Kim Lord never shows up to her own gala. Fear mounts as the hours and days drag on and Lord remains missing. Suspicion falls on the up – and – coming gallerist Greg Shaw Ferguson, who happens to be Maggie ’ s ex. A rogue ’ s gallery of eccentric art world figures could also have motive for the act, and as Maggie gets drawn into her own investigation of Lord ’ s disappearance, she ’ ll come to suspect all of those closest to her. Set against a culture that often fetishizes violence, Still Lives is a page – turning exodus into the art world ’ s hall of mirrors, and one woman ’ s journey into the belly of an industry flooded with money

and secrets. “ It ’ s a thrilling mystery that will leave you wondering which characters you can and can ’ t trust . . . There ’ s a twist at the end that still keeps us up at night, it's THAT good. ”

The dilemma of democracy arises from two contrasting trends. More people in the established

democracies are participating in civil society activity, contacting government officials, protesting, and using online activism and other creative forms of participation. At the same time, the importance of social status as an influence on political activity is increasing. The democratic principle of the equality of voice is eroding. The politically rich are getting richer - and the politically needy have less voice. This book assembles an unprecedented set of international public opinion surveys to identify the individual, institutional, and political factors that produce these trends. New forms of activity place greater demands on participants, raising the importance of social status skills and resources. Civil society activity further widens the participation gap. New norms of citizenship shift how people participate. And generational change and new online forms of activism accentuate this process. Effective and representative government requires a participatory citizenry and equal voice, and participation trends are undermining these

outcomes. The Participation Gap both documents the growing participation gap in contemporary democracies and suggests ways that we can better achieve their theoretical ideal of a participatory citizenry and equal voice.

Ferroelectric materials exhibit a wide spectrum of functional properties, including switchable polarization,

piezoelectricity, high non-linear optical activity, pyroelectricity, and non-linear dielectric behaviour. These properties are crucial for application in electronic devices such as sensors, microactuators, infrared detectors, microwave phase filters and, non-volatile memories. This unique combination of properties of ferroelectric materials has attracted researchers and engineers for a long time. This book reviews a wide range of diverse topics related to the phenomenon of ferroelectricity (in the bulk as well as thin film form)

and provides a forum for scientists, engineers, and students working in this field. The present book containing 24 chapters is a result of contributions of experts from international scientific community working in different aspects of ferroelectricity related to experimental and theoretical work aimed at the understanding of ferroelectricity and their utilization in devices. It provides an up-to-date insightful coverage to the recent advances in the synthesis, characterization, functional properties and potential device applications

in specialized areas.

A sexy, single-dad romance standalone Don't sleep with the nanny. That should be a simple rule to follow, but some things are easier said than done. Especially when the nanny I hire to take care of my wild child daughter turns out to be the one I can't forget. The woman I shared a red-hot anonymous kiss with a few weeks ago when we were trapped in an elevator? Yeah, seems she's one and the same—sweet,

sexy, irresistible Daisy. When she shows up in town, fresh-faced and ready to care for my kid, it hits me like a kick from a stubborn mare. I'm in way over my head. I've been fantasizing about seeing my elevator woman again. And now I'm seeing her every damn day at the breakfast table, or at the playground with my adorable daughter. Daisy is exactly what my little girl needs. But every day I spend with Daisy makes me want her more, only I can't have her. I won't risk breaking the unbreakable

rule to take a chance at love. Until the night I do.

Then a Wind Blew is set in the final months of the war in Rhodesia, before it became Zimbabwe, and the story unfolds through the voices of three women. Susan Haig, a white settler, has lost one son in the war and seen her other son declared 'unfit for duty'. Nyanye Maseka has fled with her sister to a guerrilla camp in Mozambique, her home village destroyed, her mother missing. Beth Lytton is a nun in a church mission in an African

Reserve, watching her adopted country tear itself apart. The three women have nothing in common. Yet the events of war conspire to draw them into each other's lives in a way that none of them could have imagined. This absorbing and sensitive novel develops and intertwines their stories, showing us the ugliness of war for women caught up in it and reminding us that, in the end, we all depend on each other.

Mallory is a successful artist who learnt early in life that art could provide him with an escape from the mundane and the unpleasant. He has never come to terms with the abduction of his infant son and daughter at the hands of his first wife, Fleur. But now, just as he discovers he is suffering from an incurable disease, it seems he may have found his daughter. His current marriage to the much younger Sueyen is in tatters, and his relationship with his

exwife and their daughter, Kimberley, who has a severe disability, is in trouble as well. With art now failing him, Mallory finds solace in Em, the enigmatic young woman who has arrived to help him build a mudbrick house. The Pepper Gate is a finely crafted, character driven novel about truth, denial and sublimation, and the lengths to which we will go to preserve the life we seek for ourselves.

Enjoyable story-based practice for the Cambridge Young Learners English (YLE) Tests. Storyfun for Starters Teacher's Book includes an Audio CD with recordings of the stories and listening activities from the Student's Book. Teachers can use the stories to capture learners' imagination. Stories are exploited to present YLE tasks in a motivating and easy-to-use way. Each story unit provides enough material to cover between 90-180 minutes class time. Enjoyable activities including games, projects and poems are balanced with exam-style questions to

make learning fun. Teaching tips and photocopiable activities are included and teachers can be confident the test preparation provides coverage of key areas of Cambridge Young Learners English grammar and vocabulary.

EY Tax Guide 2015 National Academies Press

The substantially revised fourth edition of a widely used text, offering both an introduction to recursive methods and advanced material, mixing tools and sample applications. Recursive methods provide powerful ways to pose and solve problems in dynamic macroeconomics. Recursive

Macroeconomic Theory offers both an introduction to recursive methods and more advanced material. Only practice in solving diverse problems fully conveys the advantages of the recursive approach, so the book provides many applications. This fourth edition features two new chapters and substantial revisions to other chapters that demonstrate the power of recursive methods. One new chapter applies the recursive approach to Ramsey taxation and sharply characterizes the time inconsistency of optimal policies. These insights are

used in other chapters to simplify recursive formulations of Ramsey plans and credible government policies. The second new chapter explores the mechanics of matching models and identifies a common channel through which productivity shocks are magnified across a variety of matching models. Other chapters have been extended and refined. For example, there is new material on heterogeneous beliefs in both complete and incomplete markets models; and there is a deeper account of forces that shape aggregate labor supply

elasticities in lifecycle models. The book is suitable for first- and second-year graduate courses in macroeconomics. Most chapters conclude with exercises; many exercises and examples use Matlab or Python computer programming languages.

TAUP 91 covers the proceedings of the Second International Workshop on Theoretical and Phenomenological Aspects of Underground Physics, held in Toledo, Spain on September 9-13, 1991. The book focuses on the processes, methodologies, reactions, and transformations involved in underground physics. The selection first offers information on the fundamental issues in particle astrophysics and an overview of the problems related to general cosmology. Topics include connections

between particle physics, astrophysics, and cosmology, stellar physics and particles, astrophysical ages, cosmic background radiation, and abundances of light elements. The text also takes a look at big bang nucleosynthesis constraints on new physics and microwave background radiation. The publication ponders on very wide band interferometric gravitational wave antenna and search for stellar gravitational collapse by macro. The text also examines high energy cosmic neutrinos of acceleration and non-acceleration origin; tests of general relativity and Newtonian gravity at large distances and the dark matter problem; and nuclear form factors

for the scattering of neutralinos.

The selection is a valuable reference for readers interested in underground physics.

The Science and Design of Educational Assessment Oxford University Press

Education is a hot topic. From the stage of presidential debates to tonight's dinner table, it is an issue that most Americans are deeply concerned about. While there are many strategies for improving the educational process, we need a way to find out what works and what doesn't work as well. Educational assessment seeks to determine just how well students are learning and is an integral part of our quest for improved education.

The nation is pinning greater expectations on educational assessment than ever before. We look to these assessment tools when documenting whether students and institutions are truly meeting education goals. But we must stop and ask a crucial question: What kind of assessment is most effective? At a time when traditional testing is subject to increasing criticism, research suggests that new, exciting approaches to assessment may be on the horizon. Advances in the sciences of how people learn and how to measure such learning offer the hope of developing new kinds of assessments-assessments that help students succeed in school by making as clear as

possible the nature of their accomplishments and the progress of their learning. Knowing What Students Know essentially explains how expanding knowledge in the scientific fields of human learning and educational measurement can form the foundations of an improved approach to assessment. These advances suggest ways that the targets of assessment-what students know and how well they know it-as well as the methods used to make inferences about student learning can be made more valid and instructionally useful. Principles for designing and using these new kinds of assessments are presented, and examples are used to illustrate the

principles. Implications for policy, practice, and research are also explored. With the promise of a productive research-based approach to assessment of student learning, Knowing What Students Know will be important to education administrators, assessment designers, teachers and teacher educators, and education advocates.

The rapid pace of current developments in the theoretical, analytical, numerical and experimental fields of dynamic failure of materials called for an international seminar of workshop style aimed at improving the finding and understanding of solutions to the basic physical processes involved in dynamic failure. The Vienna Seminar DFM-I was held at the Technical University Vienna in the historic administration building in the city center under the auspices of the university.

More than 30 international experts from all over the world followed the invitation to participate at this seminar. High in the list of priorities was the common desire for ample time for discussions after each technical presentation, a fact and a chance frequently made overextensive use of during the seminar. Thus, opportunity was given to the seminar participants to present and expose ideas and results of their original research work, either terminated, ongoing, proposed or conceived and intended, to an international forum of experts for critical discussions, evaluation and appraisal. The technical program included dynamic failure of polymers and steel, numerical

modelling of fracture processes, experimental techniques and analytical/numerical investigation of crack/wave interaction problems. The scope of the contributions stretched from implementation of advanced mathematical techniques in the theoretical developments to most direct applications in various fields of engineering practice. Papers published in this volume represent revised, updated and expanded versions of the seminar contributions.

Leukocyte adhesion molecules have been the subject of intense

basic and preclinical research.

Results from clinical trials obtained so far with antibodies directed towards these surface proteins offer promise for the prevention of graft rejection and effective treatment of acute and chronic inflammatory disease.

This volume presents a comprehensive review of contemporary research on the structure, function and regulation of leukocyte adhesion molecules and their ligands, from the molecular to the clinical level. The blend of basic science and clinical applications presented in *Structure, Function and Regulation of Molecules Involved in Leukocyte Adhesion* provides clear evidence of the biological

importance of cell-cell interactions and the many potential clinical dividends afforded by understanding the molecular basis of cell adhesion. It will appeal to a broad range of readers in immunology and cell biology.

Populations of High-Energy Sources in Galaxies (IAU S230) John Wiley & Sons

A smart, gossipy, and very funny examination of celebrity culture from New York's premiere social columnist. Ben Widdicombe is the only writer to have worked for Page Six, TMZ, and The New York Times—an unusual Triple Crown that allowed him personal access to the full

gamut of Hollywood and high society's rich and famous, from billionaires like Rupert Murdoch, Donald Trump, and the Koch brothers, to pop culture icons Kim Kardashian and Paris Hilton. Now, in *Gatecrasher*, New York's premiere gossip-turned-society writer spills the sensational stories that never made it to print. Widdicombe has appeared at nearly every gossip-worthy venue—from the Oscars and the Hamptons, to the Met Gala and Mar-a-Lago—and has rubbed elbows with a dizzying array of celebrities (and wannabes), and he whisks us

past the clipboard and velvet rope to teach us the golden rules of gatecrashing, dishing on dozens of boldface names along the way. Widdicombe shares secrets for how to crash the parties, climb the ladder, avoid the paparazzi, or make small talk with Henry Kissinger and Anna Wintour. Endlessly fun and extremely telling, *Gatecrasher* makes the unnerving argument that Paris Hilton conquering pop culture two decades ago lead to Donald Trump winning the White House. "As the gossip pages go, so goes the country," he says.
