the pharmacist's best source of information is Nonprescription Product Therapeutics. This text emphasizes the pharmacist's role in triage--assessing the best nonprescription products for a client and knowing when medical conditions warrant a referral to another health professional. Organized by condition rather than by drug, the text is easy to consult, and complements a disease-based approach to therapeutics. Pharmacists will find useful information on ingredients, interactions, contraindications, and other essentials for helping customers choose appropriate nonprescription products. The Second Edition contains additional charts, drawings, illustrations, and tables. The book includes decision-making algorithms, case studies, patient counseling tips, and warnings on dangerous or life-threatening ingredients, actions, or situations. Another

Drug overdose, driven largely by overdose related to the use of opioids, is now the leading cause of unintentional injury death in the United States. The ongoing opioid crisis lies at the intersection of two public health challenges: reducing the burden of suffering from pain and containing the rising toll of the harms that can arise from the use of opioid medications. Chronic pain and opioid use disorder both represent complex human conditions affecting millions of Americans and causing untold disability and loss of function. In the context of the growing opioid problem, the U.S. Food and Drug Administration (FDA)

launched an Opioids Action Plan in early 2016. As part of this plan, the FDA asked the National Academies of Sciences, Engineering, and Medicine to convene a committee to update the state of the science on pain research, care, and education and to identify actions the FDA and others can take to respond to the opioid epidemic, with a particular focus on informing FDA's development of a formal method for incorporating individual and societal considerations into its risk-benefit framework for opioid approval and monitoring.
