Popular Photography Stone Bridge Press, Inc. This volume teaches academics and graduate students how to write seductive academic prose by learning a literacy rarely taught in academic writing or style handbooks: to use literary devices and figures of speech to meet ideals of stylish communication; and how these ideals and supposed 'literary' techniques serve academic readers and writers. Part one explores the persistent problem of the bad academic writing style called 'academese' and

argues stylish academic writers avoid it by writing with figures of speech. Part two teaches and illustrates figures of speech seductive writers write into academic prose to convey the music and rhythms of good speech, cohesion, coherence and storytelling, and the personality and passions of the author. Part three argues the academy will not heal itself of academese until academic writing pedagogies teach students to care enough for their readers to write with figures of speech that craft seductive academic writing.

Modern Mathematical Statistics with Applications, Second Edition strikes a balance between mathematical foundations and statistical practice. In keeping with the recommendation that every math student should study statistics and probability with an emphasis on data analysis, accomplished authors Jay Devore and Kenneth Berk make statistical concepts and methods clear and relevant through careful explanations and a broad range of applications involving real data. The main focus of the book is on presenting and illustrating methods of inferential statistics that are

useful in research. It begins with a chapter on descriptive statistics that immediately exposes the reader to real data. The next six chapters develop the probability material that bridges the gap between descriptive and inferential statistics. Point estimation, inferences based on statistical intervals, and hypothesis testing are then introduced in the next three chapters. The remainder of the book explores the use of this methodology in a variety of more complex settings. This edition includes a plethora of new exercises, a number of which are similar to what would be encountered on the actuarial exams that cover probability and statistics. Representative applications include investigating whether the average tip percentage in a particular restaurant exceeds the standard 15%, considering whether the flavor and aroma of Champagne are affected by bottle temperature or type of pour, modeling the relationship between college graduation rate and average SAT score, and assessing the

likelihood of O-ring failure in space shuttle launches as related to launch temperature. "*Hyperion*," "*Kavanagh*," and "*The Trouvères*" David Scott Johnson
