while running The main focus of the book is on presenting and illustrating methods of inferential statistics used by investigators in a wide variety of disciplines, from actuarial science all the way to zoology. It begins with a chapter on descriptive statistics that immediately exposes the reader to the analysis of real data. The next six chapters develop the probability material that facilitates the transition from simply describing data to drawing formal conclusions based on inferential methodology. Point estimation, the use of statistical intervals, and hypothesis testing are the topics of the first three inferential chapters. The remainder of the book explores the use of

these methods in a variety of more complex settings. This edition includes many new examples and exercises as well as an introduction to the simulation of events and probability distributions. There are more than 1300 exercises in the book, ranging from very straightforward to reasonably challenging. Many sections have been rewritten with the goal of streamlining and providing a more accessible exposition. Output from the most common statistical software packages is included wherever appropriate (a feature absent from virtually all other mathematical statistics textbooks). problems will encourage students to pursue more training in the discipline. Stereophile David Scott Johnson This volume teaches academics and graduate students how to write seductive academic prose by learning a literacy rarely taught in academic writing or style handbooks: to use literary devices and figures of speech to meet ideals of stylish communication; and how these ideals and supposed ' literary ' techniques serve academic readers and writers. Part one explores the persistent problem of the bad academic writing style called

' academese ' and argues stylish academic writers avoid it by writing with figures of speech. Part two teaches and illustrates figures of speech seductive writers write into academic prose to convey the music and rhythms of good speech, cohesion, coherence and storytelling, and the personality and passions of the author. Part three argues the academy will not heal itself of academese until academic writing pedagogies teach students to care enough for their readers to write with figures of speech that craft seductive academic writing.
