Does your mother call you in a panic whenever there's a storm warning for your area? Does she act as though it's her duty to alert you to every health story on the news? Have you ever been briefly out of touch with your mother only to find she's phoned everyone short of the National Guard to track you down -- or, just maybe, are you that mother? Take comfort in knowing you're not alone, as Amy Borkowsky shares more than a decade's worth of maddening phone messages from her hilariously overprotective mom. Based on the hit CD of the same name, Amy's Answering Machine features actual messages in which Amy's mom warns her not to wear a red bathrobe because a friend's grandson "said that red is a gang color"...advises her not to get a cat because "what if you finally found a nice guy and he was allergic?"...cautions her not to wear crepe-soled shoes because "they were just saying on the news that if you're ever in a plane crash, crepe is no good if you have to go down the slide." Amy also reveals the stories behind the messages and shares calls not available on CD, each one brimming with the worry and annoying comments only a loving mother could dish out. The same warnings and suggestions that had Amy cringing are sure to have you doubled over with laughter. But before you turn the page, take some advice from Amy's mom: Make sure you have plenty of reading light, because squinting causes crow's feet.

More an art than a science, the reference interview requires not only knowing a specific set of skills, but also how to apply those skills in an ever-changing world. Good reference interviews accomplish three goals: establishing contact with the user, determining what the user's information need actually is, and checking to make sure that the answer actually meets that need completely. Built around timeless service principles including Ranganathan's Five Laws, *The Reference Interview Today: Negotiating and Answering Questions Face to Face, on the Phone, and Virtually* is a practical field guide to conducting reference interviews in every modality: face-to-face, phone, chat, text, virtual world such as Second Life, and even mashup reference interviews where multiple modalities are used to answer the question. Following a concise presentation of reference interview basics, the heart of the book is 12 different reference interview scenarios set in different modes and demonstrating a specific principle. Each of these twelve follows a similar construction: a general overview of the principle (for example, save the time of the reader), a script of the reference interview, and then learning questions designed to demonstrate the principle(s) as illustrated in the script. Examples range from assisting faculty members with scholarly resources to helping a high school student with a paper to assisting a hairdresser with a reference question. One scenario is based in the year 2025 to emphasize the timeless nature of reference service. Seamlessly combining both time-honored principles and multiple technologies, this practical book demonstrates how librarians can be as relevant and necessary in the digital age as in the print world. Appropriate for both novice and experienced librarians as well as for LIS students, this concise handbook speaks to those working in or preparing for careers in public, school, academic, and special libraries..

This book is a timely and detailed exploration of the impact and issues of the Internet in public libraries and their implications for society, policy, and professional practice. *Public Libraries and the Internet: Roles, Perspectives, and Implications* explores the impact of the Internet and the expansion of the networked environment on U.S. public libraries through more than a dozen essays written by leading scholars and administrators. Notwithstanding the far-reaching changes wrought by the Internet, this is the first attempt to provide a comprehensive exploration of the subject over time and across areas of practice. This wide-ranging volume, edited by the authors of several national studies tracking the use and involvement of public libraries with the Internet since 1994, offers both description and assessment. It discusses the ways in which the roles and services of public libraries have changed as a result of the Internet and offers a perspective on the meaning and impact of these changes. Perhaps most critically, it also suggests possible futures and opportunities as public libraries continue to evolve in this networked environment.

How to design a world in which we rely less on stuff, and more on people. We're filling up the world with technology and devices, but we've lost sight of an important question: What is this stuff for? What value does it add to our lives? So asks author John Thackara in his new book, *In the Bubble: Designing for a Complex World*. These are tough questions for the pushers of technology to answer. Our economic system is centered on technology, so it would be no small matter if "tech" ceased to be an end-in-itself in our daily lives. Technology is not going to go away, but the time to discuss the end it will serve is before we deploy it, not after. We need to ask what purpose will be served by the broadband communications, smart materials, wearable computing, and connected appliances that we're unleashing upon the world. We need to ask what impact all this stuff will have on our daily lives. Who will look after it, and how? *In the Bubble* is about a world based less on stuff and more on people. Thackara describes a transformation that is taking place now—not in a remote science fiction future; it's not about, as he puts it, "the schlock of the new" but about radical innovation already emerging in daily life. We are regaining respect for what people can do that technology can't. *In the Bubble* describes services designed to help people carry out daily activities in new ways. Many of these services involve technology—ranging from body implants to wide-bodied jets. But objects and systems play a supporting role in a people-centered world. The design focus is on services, not things. And new principles—above all, lightness—inform the way these services are designed and used. At the heart of *In the Bubble* is a belief, informed by a wealth of real-world examples, that ethics and responsibility can inform design decisions without impeding social and technical innovation.
