Porting heads is an art and science. It takes a
craftsman's touch to shape the surfaces of the
head for the optimal flow characteristics and the
best performance. Porting demands the right
tools, skills, and application of knowledge. Few
other engine builders have the same level of
knowledge and skill porting engine heads as
David Vizard. All the aspects of porting stock as
well as aftermarket heads in aluminum and cast-
iron constructions are covered. Vizard goes into
great depth and detail on porting aftermarket
heads. Starting with the basic techniques up to
more advanced techniques, you are shown how
to port iron and aluminum heads as well as
benefits of hand and CNC porting. You are also
shown how to build a high-quality flow bench at
home so you can test your work and obtain
professional results. Vizard shows how to
optimize flow paths through the heads, past the
valves, and into the combustion chamber. The
book covers blending the bowls, a basic porting

procedure, and also covers pocket porting, porting the intake runners, and many advanced procedures. These advanced procedures include unshrouding valves, porting a shortside turn from the floor of the port down toward the valve seat, and developing the ideal port area and angle. All of these changes combine to produce optimal flow velocity through the engine for maximum power.
