"Montello and Sutton is one of the best texts I've used in seminars on research methodology. The text offers a clear balance of quantitative vs. qualitative and physical vs. human which I've found particularly valuable. The chapters on research ethics, scientific communication, information technologies and data visualization are excellent" - Kenneth E. Foote, Department of Geography, University of Colorado at Boulder This is a broad and integrative introduction to the conduct and interpretation of scientific research, covering both geography and environmental studies. Written for undergraduate and postgraduate students, it: Explains both the conceptual and the technical aspects of research, as well as all phases of the research process Combines approaches in physical geography and environmental science, human geography and human-environment relations, and geographic and environmental information techniques (such as GIS, cartography, and remote sensing) Combines natural and social scientific approaches common to

subjects in geography and environmental studies Includes case studies of actual research projects to demonstrate the breadth of approaches taken It will be core reading for students studying scientific research methods in geography, environmental studies and related disciplines such as planning and earth science.

“ Of the over one hundred new publications on the Common Core State Standards (CCSS), this one truly stands out! In the second edition of *Building Academic Language*, Jeff Zwiers presents a much-needed, comprehensive roadmap to cultivating academic language development across all disciplines, this time placing the rigor and challenges of the CCSS front and center. A must-have resource! ”
—Andrea Honigsfeld, EdD, Molloy College “ Language is critical to the development of content learning as students delve more deeply into specific disciplines. When students possess strong academic language, they are better able to critically analyze and synthesize complex ideas and abstract concepts. In this second edition of *Building Academic Language*, Jeff Zwiers successfully builds the connections between the Common Core State Standards and academic language. This is the ‘ go to ’ resource for content teachers as they transition to the expectations for college and career readiness. ” —Katherine S. McKnight, PhD, National Louis University With the adoption of the Common Core State Standards (CCSS) by most of the United States, students need help developing their understanding and use of language within the academic context. This is crucially important throughout middle school and high school, as the subjects discussed and concepts taught require a firm grasp of language in order to understand the greater complexity of the subject matter. *Building Academic Language* shows teachers what they can do to help their students grasp language principles and develop the language skills they ’ ll need to reach their highest levels of academic achievement. The Second Edition of *Building Academic Language* includes new strategies for addressing specific Common Core standards and also provides answers to the most important questions across various content areas, including: What is academic language and how does it differ by content area? How can language-building activities support content understanding for students? How can teachers assist students in using language more effectively, especially in the academic context? How can academic language usage be modeled routinely in the classroom? How can lesson planning and assessment support academic language development? An essential resource for teaching all students, this book explains what every teacher needs to know about language for supporting reading, writing, and academic learning.

The development and widespread use of Web surveys have resulted in an outpouring of research on their design. In this volume, Tourangeau, Conrad, and Couper provide a comprehensive summary and synthesis of the literature on this increasingly popular method of data collection. The book includes new integration of the authors' work with other important research on Web surveys, including a meta-analysis of studies that compare reports on sensitive topics in Web surveys with reports collected in other modes of data collection. Adopting the total survey error framework, the book examines sampling and coverage issues, nonresponse, measurement, and the issues involved in combining modes. In addition, the concluding chapter provides a model for understanding the errors in estimates that combine data collected in more than one mode. Web surveys have several important characteristics that affect their ability to collect accurate survey data. Discussing these in detail, the authors address basic design decisions from input widgets to background colors. They additionally focus on the visual character of Web surveys, on their ability to automatically interact with respondents, and on the Web as a method of self-administration. The Science of Web Surveys is relevant for those with the practical goal of improving their own surveys and those with an interest in understanding an increasingly important method of data collection.

This report attempts to discover how students think about and use mathematics in open-ended questions. Part I, "Open-ended Questions in Mathematics," describes the rationale for adding open-ended questions to the grade 12 mathematics test of the California Assessment Program (CAP). Part II describes the findings from students' responses to five selected open-ended problems from the 1987 test. Strengths and weaknesses in the students' responses are examined, including students' misconceptions. In part III the CAP advisory committee's reasons for developing the scoring procedure used for the five open-ended questions are discussed. Five scoring procedures for five problems are presented. Part IV includes 20 student responses that have been scored and two responses that are in the ten problems given in 1987 and 1988. A set of nine open-ended problems were presented. (YP)
