A strong and fluent competency in mathematics is a necessary condition for scientific, technological and economic progress.

However, it is widely recognized that problem solving, reasoning, and thinking processes are critical areas in which students' performance lags far behind what should be expected and desired.

Mathematics is indeed an important subject, but is also important to be able to use it in extra-mathematical contexts. Thinking strictly in terms of mathematics or thinking in terms of its relations with the real world involve quite different processes and issues.

This book includes the revised papers presented at the NATO ARW "Information Technology and Mathematical Problem Solving Research", held in April 1991, in Viana do Castelo, Portugal, which focused on the implications of computerized learning environments and cognitive psychology research for these mathematical activities. In recent years, several committees, professional associations, and distinguished individuals throughout the world have put forward proposals to renew mathematics curricula, all emphasizing the importance of problem solving. In order to be successful, these reforming intentions require a theory-driven research base. But mathematics problem solving may be considered a "chaotic field" in which progress has been quite slow.

This worktext applies current theory to classroom practice by providing, in each chapter, a brief explanation of major concepts followed by guided practical experience in administering, scoring, and interpreting reading assessment techniques. Like the popular previous editions, the Fourth Edition: *emphasizes the use of assessment and diagnosis for instructional decision making--rather than for simply giving grades; *stresses the use of informal assessment techniques--reflecting the current emphasis in educational assessment theories--but also includes coverage of standardized test scores; *provides both classroom-tested results and interpretations of the data, giving students step-by-step experience in administering, scoring, and interpreting assessment techniques; and *includes numerous "hands-on" activities. For children to be good readers, they must be taught phonemic awareness, phonics skills, how to read fluently, and how to apply comprehension strategies. Linking Reading Assessment to Instruction: An Application Worktext for Elementary Classroom Teachers, Fourth Edition, covers all four areas. This text is designed for undergraduate or graduate reading methods courses that include a diagnosis component, reading diagnosis courses, exceptional education courses, and inservice courses on reading/literacy development. Changes in the Fourth Edition: *discussion of the text's relationship to the areas of reading proposed by the National Reading Panel Report: phonemic awareness, phonics, fluency, vocabulary,

and comprehension; *updated "Suggested Readings" for all chapters; *additional references to diagnostic assessments for word-analysis skills and spelling stages; *additional grouping scenarios; *new section on determining a diagnostic path, with instructional suggestions; *relevant ESOL information added in several places; and *revised Instructor's Manual includes more activities.
