Equality, diversity, and inclusion are at the forefront of current discussion, as these issues have become an international concern for politicians, government agencies, social activists, and the general public. Higher education institutions internationally face considerable challenges in terms of diversity management of both their students and staff, which limits the success of individuals, institutions, and the sector as a whole. The Handbook of Research on Practices for Advancing Diversity and Inclusion in Higher Education

reports on current challenges that higher education institutions face in terms of diversity management and provides crucial research on the application of strategies designed to increase organizational change and support and integrate diverse individuals, including physically disabled individuals, women, and people of color, into higher education institutions. Covering a range of topics such as cultural intelligence and racial diversity, this reference work is ideal for researchers, academicians, practitioners, scholars, policymakers, educators, and students.

Inside African Anthropology offers an incisive biography of the life and work of South Africa's foremost social anthropologist, Monica Hunter Wilson. By exploring her main fieldwork and intellectual projects in southern Africa between the 1920s and 1960s, the book offers insights into her personal and intellectual life. Beginning with her origins in the remote Eastern Cape, the authors follow Wilson to the University of Cambridge and back into the field among the Mpondo of South Africa, where her studies resulted in her 1936 book *Reaction to Conquest*. Her fieldwork focus then shifted to Tanzania, where she teamed up with

her husband, Godfrey Wilson. In the 1960s, Wilson embarked on a new urban ethnography with a young South African anthropologist, Archie Mafeje, one of the many black scholars she trained. This study also provides a meticulously researched exploration of the indispensable contributions of African research assistants to the production of this famous woman scholar's cultural knowledge about mid-twentieth-century Africa.

This book shows how to do systems thinking and translate that thinking into praxis (theory informed practical action). It will be welcomed by those managing or governing in situations of complexity and uncertainty across all domains of professional and personal life. The development of capabilities to think and act systemically is an urgent priority. Humans are now a force of nature, affecting whole-earth dynamics including the earth's climate - we

live in an Anthropocene or Capitalocene and are confronted by the emergence of a 'post-truth', 'big data' world. What we have developed, organisationally and institutionally, seems very fragile. An imperative exists to recover whatever systemic sensibilities we still retain, to foster systems literacy and to invest in systems thinking in practice capability. This will be needed in future at personal, group, community, regional, national and international levels, all at the same time. Systems Practice: How to Act is structured into four parts. Part I introduces the societal need to invest in systems thinking in practice, in contexts of uncertainty and complexity epitomised by the challenges of responding to human-induced climate change. Part II unpacks what is involved in systems practice by means of a juggler isophor; examining situations where systems thinking offers useful understanding and opportunities for change. Part III identifies the main factors that constrain the uptake of systems practice and makes the case for

innovation in practice by means of systemic inquiry, systemic action research and systemic intervention. The book concludes with Part IV, which critically examines how systems practice is, or might be, utilised at different levels from the personal to the societal./div

In 1857 all of the Arts students at the University of Sydney could fit into a single photograph. Now there are more than one million university students in Australia. After World War II, Australian universities became less elite but more important, growing from six small institutions educating less than 0.2 per cent of the population to a system enrolling over a quarter of high school graduates. And yet, universities today are plagued with

ingrained problems. More than 50 per cent of the cost of universities goes to just running them. They now have an explicit commercial focus. They compete bitterly for students and funding, an issue sharply underlined by the latest federal budget. Scholars rarely feel their vice-chancellors represent them and within their own ranks, academics squabble for scraps. Knowing Australia is a perceptive, clear-eyed account of Australian universities, recounting their history from the 1850s to the present. Investigating the changing nature of higher education, it asks whether this success is likely to continue in the 21st century, as the university's hold over knowledge grows ever more tenuous.

McGraw-Hill Education (UK)

It is now accepted that humans are changing the climate of the Earth and this is the most compelling amongst a long litany of reasons as to why, collectively, we have to change our ways of thinking and acting. Most people now recognise

that we have to be capable of adapting quickly as new and uncertain circumstances emerge: this capability will need to exist at personal, group, community, regional, national and international levels, all at the same time. Systems Practice is structured into four parts. Part I introduces the societal need to move towards a more systemic and adaptive governance against the backdrop of human-induced climate change. Part II unpacks what is involved in systems practice by means of a juggler metaphor; examining situations where systems thinking offers useful understanding and opportunities for change. Part III identifies the main factors that constrain the uptake of systems practice and makes the case for innovation in practice by means of systemic inquiry, systemic action research and systemic intervention. The book concludes with Part IV, which critically examines how systems practice is, or might be, utilised at different levels from the personal to the societal. The development of our capabilities to think and act systemically is

an urgent priority and Systems Practice aims to show how to do systems thinking and translate that thinking into praxis (theory informed practical action) which will be welcomed by those managing in situations of complexity and uncertainty across all domains of professional and personal concern.
