Operant conditioning is a learning theory that was postulated by Burrhus Frederic Skinner and it states that learning takes place through rewards and punishments for certain behavior. In other words, through operant conditioning, a correlation between particular conduct and the consequences of this kind of conduct is built (Coon & Mitterer, 2008).

Operant conditioning is an approach to learning that occurs through reward and punishment by creating a connection between a specific behavior and a consequence for that behavior. Skinner utilized the term 'operant' to refer specifically to an "active behavior that operates upon the environment to generate consequences" (McLeod, 2007, ¶ 4).

[14 Best Examples Of Operant Conditioning - RankRed](#)

Operant conditioning tries to negate the belief that internal thoughts and mere motivations would bring about learning a behavior. As a behaviorist, Skinner thought that only external causes of behavior should be considered. The term "operant" was used by Skinner in order to give us a good overview of his theory. By this term, he meant that this type of conditioning involves only external ...

To study operant conditioning, Skinner conducted experiments using a " Skinner Box, " a small box that had a lever at one end that would provide food or water when pressed. An animal, like a pigeon or rat, was placed in the box where it was free to move around. Eventually the animal would press the lever and be rewarded. Skinner found that this process resulted in the animal pressing the ...

[Free Operant Conditioning Essay Sample](#)

Various types of fines, such as speeding tickets or littering fines, are often presented as examples of the operant conditioning process. If you get fined for driving over the speed limit, that would be the case of the negative punishment, where something is taken away from you after a behavior. The government takes a specific amount as a penalty with the apparent intent of reducing speeding ...

[Operant Conditioning Paper Sample](#)

Operant conditioning is a method of learning that occurs through rewards and punishments for behavior. Through operant conditioning, an individual makes an association between a particular behavior and a consequence. B.F Skinner is regarded as the father of operant conditioning and introduced a new term to behavioral psychology, reinforcement.
