Introduction Operant and ical conditioning are different methods of learning. Conditioning is the only word that is common, and it is defined as acquisition of specific patterns of behavior when there is a well-defined stimulus. Classical conditioning occurs when a stimuli is linked with an animal such as food, with an unrelated stimuli, were it not for food.  
Operant Conditioning Paper | Reinforcement | Mind – Body Problem  
Operant conditioning works because sometimes the subject is rewarded and sometimes not and this has found to be very successful (the most successful, in fact) in conditioning. For example, if one sometimes gives dogs food off their plate and sometimes not, the dog will be conditioned to wait always for the food because sometimes he gets it.  
(PDF) Operant Conditioning - ResearchGate  
Operant conditioning is a method of learning that occurs through rewards and punishments for behaviour. Through operant conditioning, an individual makes an association between a particular behaviour and a consequence. B.F Skinner is regarded as the father of operant conditioning and introduced a new term to behavioural psychology, reinforcement.
