This book is an essential resource

for facilitators seeking to help students develop their knowledge of management practice in Italy. It presents a collection of the best case studies and accompanying teaching notes from the Italian Association for Management Development (ASFOR) competition in 2014. The cases are written by teachers across many of the members of ASFOR in Italy, leading business schools, corporate universities and academia. Knowledge gained by professionals often remains implicit and is rarely shared. By grouping together the award-winning case studies in this volume, readers can gain an important insight into how management is conducted in Italy.

This collection shines a light on management practices across several industries. The Italian economy differs from others in that it is one in which small and family-run businesses dominate, and the relationship between the private sector and public life is unique. As a result, The Italian Model of Management provides the opportunity for students to enlarge the Anglo-Saxon model and perspective of management, and to offer cross-cultural learning experiences, based on the distinction of a “ Made in Italy ” competitive advantage. Each case provides an engaging story, plots the strategic development of the organization in question, and is supported by online teaching

guidance and teaching notes.

Auto manufacturing holds the

promise of employing many young Indians in relatively well-paid, high-skill employment, but this promise is threatened by the industry's role as a site of immense conflict in recent years. This book asks: how do we explain this conflict? What are the implications of conflict for the ambitious economic development agendas of Indian governments? Based upon extensive field research in India's National Capital Region, this book is the first to focus on labour relations in the Indian auto industry. It proposes the theory that conflict in the auto industry has been driven by twin forces: first, the intersection of global networks of auto manufacturing with regional

social structures which have always relied on informal and precariously-employed workers; and, second, the systematic displacement of securely-employed 'regular workers' by waves of precariously-employed 'de facto informal workers'.
