Built as both a fighter-interceptor and fighter-bomber, the F-86 Sabre

(sometimes called the Sabrejet) was one of the most widely-produced fighters of the Cold War. In December of 1950, three squadrons of Sabres were rushed into combat in Korea, where they dueled North Korean, Chinese and Russian pilots flying the MiG-15. By the time the war was over, F-86 pilots achieved a stunning victory ratio - destroying nearly 800 enemy aircraft with a loss of only 76 Sabres. The nimble jet also saw

combat in the Taiwan Straight Crisis and the Indo-Pakistan Wars of 1965 and 1971.

Originally printed by North American and the U.S. Air Force, this F-86 Flight Operating Manual taught pilots everything they needed to know before entering the cockpit. Classified "Restricted," the manual was recently declassified and is here reprinted in book form. This facsimile has been reformatted and color images appear in black and white. Buckminster Fuller

desperately needed time-capsules of wisdom for the critical moment he foresaw, and in which we find ourselves. Long out of print, they are now being published again, together with commentary by Jaime Snyder, the grandson of Buckminster Fuller. Designed for a new generation of readers, Snyder prepared these editions with supplementary material providing background on the texts, factual updates, and interpretation of his visionary ideas. Initially published in 1969, and one of Fuller's most popular works, *Operating Manual for Spaceship Earth* is a brilliant synthesis of his world view. In this very accessible volume,

Fuller investigates the great challenges facing humanity, and the principles for avoiding extinction and "exercising our option to make it." How will humanity survive? How does automation influence individualization? How can we utilize our resources more effectively to realize our potential to end poverty in this generation? He questions the concept of specialization, calls for a design revolution of innovation, and offers advice on how to guide "spaceship earth" toward a sustainable future. And it Came to Pass – Not to Stay brings together Buckminster Fuller's lyrical and philosophical best, including seven "essays" in a form he

called his "ventilated prose", and as always addressing the current global crisis and his predictions for the future. These essays, including "How Little I Know", "What I am Trying to Do", "Soft Revolution", and "Ethics", put the task of ushering in a new era of humanity in the context of "always starting with the universe." In rare form, Fuller elegantly weaves the personal, the playful, the simple, and the profound. Utopia or Oblivion is a provocative blueprint for the future. This comprehensive volume is composed of essays derived from the lectures he gave all over the world during the 1960's. Fuller's thesis is that humanity – for the first time in

---

its history – has the opportunity to create a world where the needs of 100% of humanity are met. This is Fuller in his prime, relaying his urgent message for earthians’ critical moment and presenting pioneering solutions which reflect his commitment to the potential of innovative design to create technology that does “more with less” and thereby improves human lives . . . “This is what man tends to call utopia. It’s a fairly small word, but inadequate to describe the extraordinary new freedom of man in a new relationship to universe - the alternative of which is oblivion.”

The Boeing B-17 was the first mass-produced, four-engine heavy bomber. Used throughout World War II for strategic bombing, the plane earned a reputation for its toughness and versatility. Carrying a crew of ten, and 8,000 pounds of bombs on long range missions, the '17 wreaked havoc on Germany during the critical years 1942-45. The ""Memphis Belle,"" the first B-17 to fly 25 missions over Europe, is perhaps the most famous plane to emerge from the European Theatre. Originally

printed by the United States Army Air Force in December of 1942, the B-17 Bomber Pilot's Flight Operating Manual taught pilots everything they needed to know about the "Queen of the Skies." Originally classified "Restricted," the manual was declassified long ago and is here reprinted in book form. Developed as both an

Grumman's F-14  
Tomcat was the U.S.

Navy's primary  
fighter from 1974  
until 2006. Over 700  
were built. The F-14  
flew its first combat  
missions shortly after  
its initial deployment  
in late 1974, flying in  
support of the

American withdrawal  
from Saigon. In 1981  
it drew first blood, as  
two F-14s from  
VF-41 downed two  
Libyan Su-22s. The  
plane compiled a  
notable combat record  
for the United States  
in both Gulf Wars and  
NATO actions in
