Manual Operations and Maintenance Manual for Energy Management

This manual has been prepared to serve as a guide for the operation and maintenance of the Bennington Bridge Boat Ramp. Operations and maintenance instructions for the major features of the project are presented. This manual has been written for project and management personnel familiar with the project and does not contain detailed information which is common to site personnel or which is presented in other existing manuals or regulations. The intent of the

operating instructions is to provide information which allows orderly and efficient use of the constructed features. The intent of the maintenance instructions is to present preventative maintenance information consisting of systematic inspections and subsequent corrective actions which should ensure long-term utilization of equipment and features. A timely preventative maintenance program reduces and virtually eliminates breakdown of essential equipment and prevents major damage to constructed features by early corrective action. This manual provides the general standards of maintenance and establishes an initial frequency of maintenance inspections which should ensure satisfactory project performance. Deviation from the inspection frequencies is permissible as conditions warrant based on experience at the project and similar equipment at comparable projects.

How to Produce Effective Operations and Maintenance Manuals

Owning a coin operated Laundromat is a great business and can be very profitable. But, unless you have all new equipment, it can quickly nickel and dime you into making a loss and going out of business, losing your investment. I write this manual not as a business major or certified appliance person [and certainly not an English major]. I write it as an average 'Joe' who bought a laundromat and needs to run and maintain the business to make an honest profit. The skills needed to run and maintain a laundromat are not rocket science and don't need expensive equipment: just common sense and logic. And for the macho guys out there, you will need to ask for help from time to time. I will assume you have no previous experience in repairing washers, dryers, change machines etc. I will get you started on a journey to taking charge of your equipment. You will get great satisfaction in making common repairs and keeping your equipment working and earning you money. The only experience I have is what I have learned from MY machines. I do not represent to provide repair

procedures for all brands, ages and types of laundromat equipment, but I will teach you how I become familiar with my equipment, their personalities, their moods and limitations. I consider this a work in progress as every week I learn something new in my 'mat'. I do not have any problem paying for repair parts. That is the cost of doing business. What I want to avoid is the \$95 service call to trouble shoot a problem by my local appliance repair company, then the part cost being doubled as their mark up and a second \$95 service call to install the newly inflated part. Even if you only make a one repair, you will save 10 times the cost of this book.
