Most decisions and plans in a firm require a forecast. Not matching supply with demand can make or break any business, and that's why forecasting is so invaluable. Forecasting can appear as a frightening topic with many arcane equations to master. For this reason, the authors start out from the very basics and provide a non-technical overview of common forecasting techniques as well as organizational aspects of creating a robust forecasting process. The book also discusses how to measure forecast accuracy to hold people accountable and guide continuous improvement. This book does not require prior knowledge of higher mathematics, statistics, or operations research. It is designed to serve as a first introduction to the non-expert, such as a manager overseeing a forecasting group, or an MBA student who needs to be familiar with the broad outlines of forecasting without specializing in it.

As an industry, interactive is different. The work entails elements of software

development, marketing, and advertising, yet it's neither purely technical nor traditional "agency" work. New Tools for Succeeding Globally
Why do so many global strategies fail--despite companies' powerful brands and other border-crossing advantages? Because a one-size-fits-all strategy no longer stands a chance. When firms believe in the illusions of a "flat" world and the death of distance, they charge across borders as if the globe were one seamless marketplace. But cross-border differences are larger than we assume. Most economic activity--including trade, real and financial investment, tourism, and communication--happens locally, not internationally. In this "semiglobalized" approach, companies can cross borders more profitably by basing their strategies on the geopolitical differences that matter; they must identify the barriers their strategies will have to overcome, and they must build bridges to cross those barriers. Based on rigorous research, Pankaj Ghemawat shows how to create

successful strategies and provides practical management tools so you can: Assess the cultural, administrative, geographic, and economic differences between regions at the industry level--and decide which ones require attention Track the implications of the specific border-crossing actions that will impact your company's ability to create value the most Generate superior performance through strategies that are optimized for the three A's: adaptation (adjusting to differences), aggregation (overcoming differences), and arbitrage (exploiting differences) Using in-depth examples, Ghemawat reveals how companies such as Cemex, Toyota, Procter & Gamble, Tata Consultancy Services, IBM, and GE Healthcare are adroitly managing cross-border differences. He also shares examples of other well-known companies that have failed at this challenge. Crucial for any business competing across borders, Redefining Global Strategy will help you make the most of our semiglobalized world.

This volume is intended to expand the dialogue and interest among both practitioners and academicians in a problem area worthy of attention by all. The concept of disaggregation admits to our current inability to solve many types of interrelated hierarchical problems simultaneously. It offers instead a sequential, iterative process as a workable and necessary procedure. The papers in this volume are selected from those presented at a Disaggregation Conference held in March, 1977 at The Ohio State University. We heartily applaud all those who participated in the conference and particularly appreciate the cooperation of those authors whose work is published in this collection. Part A contains four papers which define the various dimensions of disaggregation. The paper by Martin Starr, which was the text of his luncheon address at the conference, provides several interesting perspectives to the problem. Although disaggregation suggests tearing apart, as Professor Starr illustrates with his butterfly example, it also suggests a putting together or a synthesis which recognizes interrelationships and dependencies. The next paper by Lee Krajewski and Larry Ritzman offers a general model of disaggregation for both the manufacturing and service sectors. After reading the papers in this section, as well as the papers in subsequent sections, you will

identify other dimensions to hierarchical decision making which go beyond this generalized model.
