Modern computer technology has opened up several new possibilities for optimizing the administration of educational and psychological tests. In computer adaptive testing (CAT), tests are automatically tailored to the proficiency level of the individual examinees. Currently, nearly all large-scale testing programs in the western world are already adaptive or in the process of becoming so. Written by active CAT researchers from Europe and North America, the chapters offer a comprehensive introduction to the latest developments in the theory and practice of CAT. The book can be used both as a basic reference on the state of the art in CAT and a valuable resource in graduate courses on test theory. The theoretical chapters in this book cover such topics as item selection and ability estimation, item pool development and maintenance, item calibration and model fit, and testlet-based adaptive testing. The practical chapters describe the operational aspects of existing large-scale CAT programs.

The report is a supplement to IQSY Instruction Manual No. 10, Cosmic Ray Tables by McCracken, et al. (1965), and contains the asymptotic directions, variational coefficients and cutoff rigidities for 48 stations not included in the original manual in addition to an explanatory text. The computer programs utilized to calculate the values given in the tables are given in the appendix.

IAPX 86, 88 User's Manual

Young explores the features and capabilities of the camera in a way that far surpasses the user's manual. He guides readers through features with step-by-step setting adjustments; color illustrations; and detailed how, when, and why explanations for each option.
