Every year, the World Bank's World Development Report (WDR) features a topic of central importance to global development. The 2018 WDR—LEARNING to Realize Education's Promise—is the first ever devoted entirely to education. And the time is right: education has long been critical to human welfare, but it is even more so in a time of rapid economic and social change. The best way to equip children and youth for the future is to make their learning the center of all efforts to promote education. The 2018 WDR explores four main themes: First, education's promise: education is a powerful instrument for eradicating poverty and promoting shared prosperity, but fulfilling its potential requires better policies—both within and outside the education system. Second, the need to shine a light on learning: despite gains in access to education, recent learning assessments reveal that many young people around the world, especially those who are poor or marginalized, are leaving school unequipped with even the foundational skills they need for life. At the same time, internationally comparable learning assessments show that skills in many middle-income countries lag far behind what those countries aspire to. And too often these

shortcomings are hidden—so as a first step to tackling this learning crisis, it is essential to shine a light on it by assessing student learning better. Third, how to make schools work for all learners: research on areas such as brain science, pedagogical innovations, and school management has identified interventions that promote learning by ensuring that learners are prepared, teachers are both skilled and motivated, and other inputs support the teacher-learner relationship. Fourth, how to make systems work for learning: achieving learning throughout an education system requires more than just scaling up effective interventions. Countries must also overcome technical and political barriers by deploying salient metrics for mobilizing actors and tracking progress, building coalitions for learning, and taking an adaptive approach to reform.

A comprehensive reference on radiologic appearance, uses and complications of orthopedic devices, for radiologists, orthopedists, physicians, and students. Expanding ESL, Civics, and Citizenship Education in Your Community UCL Press Human beings have tremendous potential to acquire new knowledge, develop new skills, and improve their brains throughout life. By explicitly teaching learners about brain plasticity and malleable intelligence (the idea that they can become functionally smarter through effort) and by modeling and teaching specific learning strategies, teachers can help students experience higher levels of success as they develop a growth mindset. Discovering that learning changes their brains helps students develop this growth mindset—the belief that they can improve their knowledge and skills through the use of learning strategies and with guidance and support from teachers, coaches, and mentors. Donna Wilson and Marcus Conyers share strategies and techniques for developing growth mindsets based on their BrainSMART® program for bridging the science of learning to the practice of teaching and elaborate on their seven principles for developing and sustaining growth mindsets: \* Understand the mindsets. \* Keep plasticity front of mind. \* Learn with practical optimism. \* Set growth goals. \* Get the feedback needed. \* Improve methods. \* Focus on progress, not perfection. By maintaining a growth mindset about your students' learning potential and applying learning strategies and techniques like those shared in this book, you can guide your students to continually develop a growth mindset—and experience a positive, upward learning spiral of success!
