Real examples. Real companies. Real business decisions. Covering the core economics principles and providing engaging, relevant examples within just nineteen Chapters, Hubbard Essentials

of Economics is the perfect teaching and learning resource for a one semester unit. The authors present economics as a dynamic, relevant discipline for Australasian students. The key questions students of first year economics ask themselves are: “Why am I here?” and “Will I ever use this?” Hubbard Essentials of Economics answers these questions by demonstrating that real businesses use economics to make real decisions every day. Each chapter of the text opens with a case study featuring a real business or real business situation, refers to the study throughout the Chapter, and concludes with An Inside Look—a news article format which

illustrates how a key principle covered in the Chapter relates to real business situations or was used by a real company to make a real business decision.

This paper looks at the way in which the pattern of disease is changing in developing countries, and the implications this has for the way in which primary health care

(PHC) programs should be designed and managed. In the absence of an accepted methodology for discussing health management issues, it attempts to develop a conceptual framework suited to analyzing an environment of dynamic change. It applies this framework first to the management of primary health care programs provided by

governments, and then to the role of the non-government sector in primary care. The paper draws broad clients. If the general approach adopted seems useful, the conceptual framework needs next to be applied to a series of specific country cases to test its validity and refine it, and to adapt the general conclusions to local cultural, administrativ

e and political conditions. This paper clarifies conceptual issues regarding how to measure these costs both from an ex-post and an ex-ante (relevant for decision making) perspective, and estimates both marginal and total costs for 73 countries over the period 2002-13. We find ex-ante marginal costs for the median emerging market economy (EME) in the inter-quartile range of 2-5.5 percent per year;</p>
--	--	--

while ex-ante total costs (of sustaining FX positions) in the range of 0.2-0.7 percent of GDP per year for light interveners and 0.3-1.2 percent of GDP per year for heavy interveners. These estimates indicate that fiscal costs of sustained FX intervention (via expanding central bank balance sheets) are not negligible.
