This Intergovernmental Panel on Climate Change Special Report (IPCC-SREX) explores the challenge of understanding and managing the risks of climate extremes to advance climate change adaptation. Extreme weather and climate events, interacting with exposed and vulnerable human and natural systems, can lead to disasters. Changes in the frequency and severity of the physical events affect disaster risk, but so do the spatially diverse and temporally dynamic patterns of exposure and vulnerability. Some

types of extreme weather and climate events have increased in frequency or magnitude, but populations and assets at risk have also increased, with consequences for disaster risk.

Opportunities for managing risks of weather- and climate-related disasters exist or can be developed at any scale, local to international. Prepared following strict IPCC procedures, SREX is an invaluable assessment for anyone interested in climate extremes, environmental disasters and adaptation to climate change, including policymakers, the private sector and academic researchers.

As of May 2013, 93 children previously diagnosed with regressive autism were able to shed their autism diagnosis, their symptoms, and return to an overall state of health and vitality using the protocols revealed in this book. Kerri Rivera has outlined a very complete approach to autism recovery that includes an understanding of the importance of Biofilm theory and protocol. She recommends safe interventions that do no harm, and are helping to confront a growing epidemic. Kerri Rivera's approach includes common sense dietary recommendations, the use of supplements to restore balance to the body and immune system, as well as mild oxidative therapies to address chronic infection and inflammation. She has taken children who were in the throes of autism (meaning chronic illness) to healing. The symptoms being labeled as autism are fading away, the children are talking and socializing, and their ATEC scores prove beyond a shadow of a doubt what their parents are claiming: their children no longer have autism. Kerri Rivera's grasp of a biomedical approach to Autism recovery, paired with her passion for service has allowed families of all socioeconomic backgrounds to have what they might never have otherwise found: a means by which to help their children. This book contains over 120 testimonials from parents (and some of the children themselves) describing their journey and resulting success.

In *An Engine, Not a Camera*, Donald MacKenzie argues that the emergence of modern economic theories of finance affected financial markets in fundamental ways. These new, Nobel Prize-winning theories, based on elegant mathematical models of markets, were not simply external analyses but intrinsic parts of economic processes. Paraphrasing Milton Friedman, MacKenzie says that economic models are an engine of inquiry rather than a camera to reproduce empirical facts. More than that, the emergence of an authoritative theory of financial markets altered those markets fundamentally. For example, in 1970, there was almost no trading in financial derivatives such as "futures." By June of 2004, derivatives contracts totaling \$273 trillion were outstanding worldwide. MacKenzie suggests that this growth could never have happened without the development of theories that gave derivatives legitimacy and explained their complexities. MacKenzie examines the role played by finance theory in the two most serious crises to hit the world's financial markets in recent years: the stock market crash of 1987 and the market turmoil that engulfed the hedge fund Long-Term Capital Management in 1998. He also looks at finance theory that is somewhat beyond the mainstream—chaos theorist Benoit Mandelbrot's model of "wild" randomness. MacKenzie's pioneering work in the social studies of finance will interest anyone who wants to understand how America's financial

markets have grown into their current form. Sketching Evil Macmillan Higher Education

A Study of Active Shooter Incidents in the United States Between 2000 and 2013 In

2013, the president signed into law the Investigative Assistance for Violent Crimes Act of 2012, which granted the attorney general the authority to assist in the investigation of "violent acts and shootings occurring in a place of public use" and in the investigation of "mass killings and attempted mass killings at the request of an appropriate law enforcement official of a state or political subdivision." To provide further clarity on these threats, the Federal Bureau of Investigation (FBI) in 2014 initiated a study of "active shooter" incidents. The goal of the FBI study is to provide federal, state, and local law enforcement with data so they can better understand how to prevent, prepare for, respond to, and recover from these incidents.
