Concepts Of Programming Languages Sourcebooks, Inc. Since 1958 the Maritime Administration has continuously conducted

instructions in use of collision avoidance radar for qualified U.S. seafaring personnel and representatives of interested Federal and State Agencies. Beginning in 1963, to facilitate the expansion of training capabilities and at the same time to provide the most modern techniques in training methods, radar simulators were installed in Maritime Administration's three region

schools. It soon became apparent that to properly instruct the trainees, even with the advanced equipment, a standardize up-to-date instruction manual was needed. The first manual was later revised to serve both as a classroom textbook and as an onboard reference handbook. This newly updated manual, the fourth revision, in keeping with Maritime Administration policy, has been restructured to include improved and more effective methods of plotting techniques for use in Ocean, Great Lakes, Coastwise and Inland Waters navigation. If yours is among the tens of thousands of organizations for whom six- and seven-figure gifts are unattainable, then Andy Robinson's' new book, Big Gifts for Small Groups, is just the ticket for you and your board. The subtitle, A Board Member's 1-Hour Guide to Securing

Gifts of \$500 to \$5,000 says it all. Robinson is the straightest of shooters ? a sort of John McCain of fundraising. There literally isn't one piece of advice in this book that's glib or inauthentic. It has all been earned. But, then again, what would you expect from a fellow who first won his stripes as door to door canvasser, making 10,000 pitches on 10,000 doorsteps. As a result of Robinson's 'no bull' style, board members will take immediately to Big Gifts for Small Groups, confident the author isn't slinging unrealistic bromides. They'll learn everything they need to know from this one-hour read: how to get ready for the campaign, who to approach, where to find them; where to conduct the meeting, what to bring with

Rapid Methods for Analysis of Biological Materials in the Environment Apress Middleware is everywhere. Ever since the advent of sockets and other virtu- circuit abstractions, researchers have been looking for ways to incorporate high- value concepts into distributed systems platforms. Most distributed applications, especially Internet applications, are now programmed using such middleware platforms. Prior to 1998, there were several major conferences and workshops at which research into middleware was reported, including ICODP (International C- ference on Open Distributed Processing), ICDP (International Conference on Distributed Platforms) and SDNE (Services in Distributed and Networked - vironments). Middleware'98 was a synthesis of these three

conferences. Middleware 2000 continued the excellent tradition of Middleware'98. It provided a single venue for reporting state-of-the-art results in the provision of distributed systems platforms. The focus of Middleware 2000 was the design, implementation, deployment, and evaluation of distributed systems platforms and architectures for future networked environments. Among the 70 initial submissions to Middleware 2000, 21 papers were selected for inclusion in the technical program of the conference. Every paper was reviewed by four members of the program committee. The papers were judged according to their originality, presentation quality, and relevance to the conference topics. The accepted papers cover various subjects such as caching, reflection, quality of service, and transactions.

The environmental life cycle of a product consists of all the stages from raw material extraction through production and use to waste management. Life cycle assessment (LCA), then, is the assessment of the environmental impact of a product throughout its life cycle. The holistic perspective that LCA provides on the environmental performance of products has made it a central concept for both environmental management in industry and environmental policy-making in public government. This is a textbook on LCA for those who want to learn the practice of LCA, e.g.

environmental engineers, environmental managers and eco-designers. The title paraphrases Douglas Adams' famous story 'The Hitch Hiker's Guide to the Galaxy', in which the machine Deep Thought after seven and a half million years of computing come up with '42' as the answer to the 'great Question of Life, the Universe and Everything'. Expectations on LCA are often similar - simple answer to difficult environmental dilemmas, and the result often as incomprehensible as 42, unless one knows how to interpret LCA methodology and results. The book is organised in three parts covering LCA methodology, LCA applications and exercises on LCA. Two introductory chapters give a general overview of the LCA concept and its historical development. After that, LCA methodology is described in detail in six chapters. Different fields of LCA application are covered in five subsequent chapters. Since the aim of the book is to teach the execution of LCA, there are also a number of exercises. Smaller exercises train different aspects of LCA methodology and prepare for the larger ones, ten complete LCA exercise projects.

Although plastics are extremely successful commercially, they would never reach acceptable performance standards either in properties or processing

without the incorporation of additives. With the inclusion of additives, plastics can be used in a variety of areas competing directly with other materials, but there are still many challenges to overcome. Some additives are severely restricted by legislation, others interfere with each other-in short their effectiveness varies with circumstances. *Plastics Additives* explains these issues in an alphabetical format making them easily accessible to readers, enabling them to find specific information on a specific topic. Each additive is the subject of one or more articles, providing a succinct account of each given topic. An international group of experts in additive and polymer science, from many world class companies and institutes, explain the recent rapid changes in additive technology. They cover novel additives (scorch inhibitors, compatibilizers, surface-modified particulates etc.), the established varieties (antioxidants, biocides, antistatic agents, nucleating agents, fillers, fibres, impact modifiers, plasticizers) and many others, the articles also consider environmental concerns, interactions between additives and legislative change. With a quick reference guide and introductory articles that provide the non-specialist and newcomer with relevant information, this reference book is essential reading for anyone concerned with plastics and additives.

Misty memories of a boy born to a poor sharecropper in the worst economic depression the world has ever known come to life with dramatic clarity in this troubling memoir. Trapped into surviving on the pittance realized by his family for growing the deadly health killing tobacco plant, Jeff struggles to understand the

societal contradictions that control his existence throughout the twentieth century. Imagination and dreamy fantasies fertilize larger hopes for him as he plows his father's lonely fields and wrestles with the arbitrary behavioral imperatives that control his life. Cruelly deprived of broad cultural stimulation, Jeff struggles to realize dreams fostered by Hollywood myths and pulp fiction. Plentiful food--a gift of the land--adequate housing and most of all, a pervasive love and caring concern by others sharing this community of poverty and hard work, not only are sustaining but give him sweet lasting memories of those hard times. Anger at deprivations endured by his parents fuel ambitions to escape a life growing the noxious crops of tobacco. Nourished by the love,

warmth and generosity of a large extended family living a similar life, Jeff survives to engage the larger world where he encounters the many problems that befall allhuman beings.

The Challenge of Democracy

Cunningham, Hugh, The
Challenge of Democracy */

Focusing on the rise of democracy, this is a history of Britain from the Great Reform Act to the end of the First World War, taking a fresh view of what was a period of unprecedented and rapid change. This book provides a clear narrative of political events, and an analysis of change and continuity in ideas and in economic and social structure. Britain is set firmly in the context of world power and the possession of empire. An overarching theme is the challenge presented by democracy in a period framed by the First and Fourth Reform Acts. 'Democracy' had

no stable meaning, and its opponents were just as vocal as its advocates. The book explores its implications for the role of the state, for the governance of empire, and for the relationship between the different nations within the United Kingdom. For those intested in British history.

Belief in the devil and other evil spirits of the Christian tradition is a topic that has been widely discussed in recent years. Since the release of movies such as 'Rosemary's Baby' and 'The Exorcist', more people are wondering, Is Satan really dead? Is there such a phenomenon as obsession or possession? In 'The Devil, Demonology, and Witchcraft', Henry Ansgar Kelly postulates his belief that the existence of evil spirits is not probable and suggests that Christians would be better off acting on the assumption that they do not exist. To prove his claim, the author sets forth a history and analysis of the impact of demonological traditions developed within Judaism and Christianity over the centuries. He then considers the

incorporation of these notions into early Christian teaching with the resulting demonological dotrines of witchcraft, possession, and temptation. Kelly's conclusion is that Satan is dead, and demonology should be eliminated from Christian dogma since, according to his thesis, these manifestations in the Bible reflect the beliefs of local cultures and not divine revelation. The present edition has been substantially revised and updated by the author to include an evaluation and critique of 'The Exorcist', wherein Kelly challenges William Peter Blatty's facts of the alleged possession in 1949 on which 'The Exorcist' is based.
