Data management systems play the most crucial role in building large application systems. Since modern applications are no longer single monolithic software blocks but highly flexible and

configurable collections of cooperative services, the data management layer also has to adapt to these new requirements. Therefore, within recent years, data management systems have faced a tremendous shift from the central management of individual records in a transactional way to a platform for data integration, federation, search

services, and data analysis. This book addresses these new issues in the area of data management from multiple perspectives, in the form of individual contributions, and it outlines future challenges in the context of data management. These contributions are dedicated to Prof. em. Dr. Dr. -Ing. E. h. Hartmut Wedekind on the occasion of his 70th birthday,

---

and were (co-)authored by some of his academic descendants. Prof. Wedekind is one of the most prominent figures of the database management community in Germany, and he enjoys an excellent international reputation as well. Over the last 35 years he greatly contributed to making relational database technology a success. As far back as the

early 1970s, he covered—as the first author in Germany—the state of the art concerning the relational model and related issues in two widely used textbooks “Datenbanksysteme I” and “Datenbanksysteme II”. Without him, the idea of modeling complex-structured real-world scenarios in a relational way would be far less developed by now. Among Prof. Oracle Solaris 11

ECDL2000, the Fourth European Conference on Research and Advanced Technology for Digital Libraries, is being held this year in Lisbon, Portugal, following previous events in Pisa (1997), Heraklion (1998), and Paris (1999). One major goal of the ECDL conference series has been to draw information professionals, stakeholders, and user communities from both the

research world and from industry into a discussion of the alternative technologies, policies, and scenarios for global digital libraries. The success of previous conferences makes them a hard act to follow. The field of digital libraries draws on a truly diverse set of scientific and technical disciplines. In the past three years, moreover, global cooperation on research and development has emerged as an urgent priority, particularly in the new European Framework Programme and in the Digital Library Initiative in the United States. Because of this diversity, the field is perhaps still struggling for an identity. But this struggle for identity is itself a source of energy and creativity. Participants in this

focuses on the essentials of effective  
learning and is suitable for a two-  
semester introduction to  
programming sequence. This text  
requires no prior programming  
experience and only a modest  
amount of high school algebra.  
Objects and classes from the  
standard library are used where  
appropriate in early sections with  
coverage on object-oriented design  
starting in Chapter 8. This gradual  
approach allows students to use  
objects throughout their study of  
the core algorithmic topics,  
without teaching bad habits that  
must be un-learned later. The  
second half covers algorithms and  
data structures at a level suitable for

beginning students. Choosing the  
enhanced eText format allows  
students to develop their coding  
skills using targeted, progressive  
interactivities designed to integrate  
with the eText. All sections include  
built-in activities, open-ended  
review exercises, programming  
exercises, and projects to help  
students practice programming and  
build confidence. These activities  
go far beyond simplistic multiple-  
choice questions and animations.  
They have been designed to guide  
students along a learning path for  
mastering the complexities of  
programming. Students  
demonstrate comprehension of  
programming structures, then  
practice programming with simple  
steps in scaffolded settings, and

finally write complete, automatically graded programs. The perpetual access VitalSource Enhanced eText, when integrated with your school's learning management system, provides the capability to monitor student progress in VitalSource SCORECenter and track grades for homework or participation.

This book provides the critical information required to configure and operate the Release11i applications in one book. Several readers have told

us they saved tens of thousands of dollars after reading the previous edition of this book. Special Edition Using Oracle 11i has about 40% new content over the previous version including a new projects chapter, a new order management chapter, screen shots, tips, and, Release11i specific material. This book is the most complete reference available for the latest release of the Oracle financial, manufacturing, HRMS, and projects applications. Part 1 introduces the Oracle ERP applications and Release11i concepts. Part 2 educates the reader on proven techniques for implementing these complex and integrated systems. Part 3 discusses configuration and usage of each of the financial, distribution, manufacturing, HRMS, and project applications. Part 4 discusses working with Oracle Support, consulting firms, and compatible software vendors. The appendixes review the employment market, consulting opportunities, and provide the reader with an implementation checklist. All of Release11i's new features are covered in-depth and in practical terms. Not only will readers understand Oracle's new capabilities, they will be able to

apply them right away. The authors are highly respected consultants from BOSS Corporation. They have worked with the Oracle Applications for over eight years since Release 9. Each chapter is written and edited by an expert consultant on that topic. The authors have published many white papers and newsletters about the Oracle Applications. BOSS Corporation is an active sponsor of the Oracle Applications User Group (OAUG). The authors have attended the last 14 national conferences, presented more than a dozen white papers at OAUG conferences, participated

in the vendor exhibit hall, identified key words for white paper classification, and edited articles that are included in OAUG publications.
