Oracle Bpel Process Manager Quick Oracle BPEL Process Manager executes standard BPEL processes. Oracle BPEL Process Manager also provides a dehydration capability that enables the states of long-running flows to be automatically maintained in a database, thus enabling clustering for both fail over and scalability.

In addition, your BPEL runtime engine may provide additional tools for monitoring integrations. For example, Oracle BPEL Process Manager provides the Oracle BPEL Process Manager Console for managing, administering, and debugging processes that are deployed on the BPEL server. In addition, the BPEL server logs may also provide additional details.

Getting Started with the Oracle BPEL Process Manager

The Oracle BPEL Process Manager executes standard BPEL processes and provides a “dehydration” capability so that the state of long-running flows is automatically maintained in a database, enabling clustering for both fail-over and

Oracle BPEL process manager samples | Oracle Community

4 Getting Started with Oracle BPEL Process Manager. This chapter describes how to get started with Oracle BPEL Process Manager. BPEL process creation is described, along with key BPEL design features such as activities, partner links, adapters, and

monitors.
