"Masterful . . . [A] painstakingly researched, astonishingly erudite study...Tooze has added his name to the roll call of top-class scholars of Nazism." —Financial Times An extraordinary mythology has grown up around the Third Reich that hovers over political and moral debate even today. Adam Tooze's controversial book challenges the conventional economic interpretations of that period to explore how Hitler's surprisingly prescient vision--ultimately hindered by Germany's limited resources and his own racial ideology--was to create a German super-state to dominate Europe and compete with what he saw as America's overwhelming power in a soon-to- be globalized world. The Wages of Destruction is a chilling work of originality and tremendous scholarship that set off debate in Germany and will fundamentally change the way in which history views the Second World War.

Who is The Stig? Where did he come from? Why does he never speak? To answer these questions, award-winning biographer Simon du Beaumarche spent a year chasing The Stig and talking to those closest to him, including Jeremy Clarkson, Richard Hammond, James May and leading figures from Formula 1, music, movies and the military. What he discovered is an explosive story of intrigue, influence and a sensational conspiracy that seeks to hide the truth about one of the 21st century's greatest icons. Get behind the visor of the man, the myth, the driver, the legend, THE STIG. This book contains adult humour and some themes that may be unsuitable for children.

WHY DO BAD GUYS LIVE IN GOOD HOUSES? From Atlantis in *The Spy Who Loved Me* to Nathan Bateman's ultra-modern abode in *Ex Machina*, big-screen villains often live in architectural splendor. From a design standpoint, the villain's lair, as popularized in many of our favorite movies, is a stunning, sophisticated, envy-inducing expression of the warped drives and desires of its occupant. Lair: *Radical Homes and Hideouts of Movie Villains*, celebrates and considers several iconic villains' lairs from recent film history. From futuristic fantasies to deathtrap-laden hives, from dwellings in space to those under the sea, pop culture and architecture join forces in these outlandish, primarily modern homes and in Lair, which features buildings from fifteen films, including: *Dr. Strangelove Or: How I Learned to Stop*

Worrying and Love the Bomb *Star Wars The Incredibles Blade Runner 2049 You Only Live Twice The Ghost Writer Body Double North* by Northwest Edited by acclaimed architect Chad Oppenheim with Andrea Gollin, Lair includes interviews with production designers and other industry professionals such as Ralph Eggleston, Richard Donner, Roger Christian, David Scheunemann, Gregg Henry, and Mark Digby. Contributors include director Michael Mann, cultural critic Christopher Frayling, museum director Joseph Rosa, and architect Amy Murphy. Architectural illustrations and renderings by Carlos Fueyo provide multiple in-depth views of these spaces.

Rooted and Rising is for everyone who worries about the climate crisis and seeks spiritual practices and perspectives to renew their capacity for compassionate, purposeful, and joyful action. Leah Schade and Margaret Bullitt-Jonas gather twenty-one faith leaders, scientists, community organizers, theologians, and grassroots climate activists to offer wisdom for fellow pilgrims grappling with the weight of climate change. Acknowledging the unprecedented nature of our predicament—the fact that climate disruption is unraveling the web of life and threatening the end of human civilization—the authors share their stories of grief and hope, fear and faith. Together, the essays, introductory sections, and discussion questions reveal that our present crisis can elicit a depth of wisdom, insight, and motivation with power to guide us toward a more peaceful, just, and Earth-honoring future. With a foreword by Mary Evelyn Tucker and a special introduction by Bill McKibben, the book presents an interfaith perspective that welcomes and challenges readers of all backgrounds.

Illuminating the moral dilemmas that lie at the heart of a slaveholding society, this book tells the story of a young slave who was sexually exploited by her master and ultimately executed for his murder. Celia was only fourteen years old when she was acquired by John Newsom, an aging widower and one of the most prosperous and respected citizens of Callaway County, Missouri. The pattern of sexual abuse that would mark their entire relationship began almost immediately. After purchasing Celia in a neighboring county, Newsom raped her on the journey back to his farm. He then established her in a small cabin near his house and visited her regularly (most likely with the knowledge of the son and two daughters who lived with him). Over the next five years, Celia bore Newsom two children; meanwhile, she became involved with a slave named George and resolved at his insistence to end the relationship with her master. When Newsom refused, Celia one night struck him fatally with a club and disposed of his body in her fireplace. Her act quickly discovered, Celia was brought to trial. She received a surprisingly vigorous defense from her court-appointed attorneys, who built their case on a state law allowing women the use of deadly force to defend their honor. Nevertheless, the court upheld the tenets of a white social order that wielded almost total control over the lives of slaves. Celia was found guilty and hanged. Melton A. McLaurin uses Celia's story to reveal the tensions that strained the fabric of antebellum southern society. Celia's case demonstrates how one master's abuse of power over a single slave forced whites to make moral decisions about the nature of slavery. McLaurin focuses sharply on the role of gender, exploring the degree to which female slaves were sexually exploited, the conditions that often prevented white women from stopping such abuse, and the inability of male slaves to defend slave women. Setting the case in the context of the 1850s slavery debates, he also probes the manner in which the legal system was used to justify slavery. By granting slaves certain statutory rights (which were usually rendered meaningless by the customary prerogatives of masters), southerners could argue that they observed moral restraint in the operations of their peculiar institution. An important addition to our understanding of the pre-Civil War era, *Celia, A Slave* is also an intensely compelling narrative of one woman pushed beyond the limits of her endurance by a system that denied her humanity at the most basic level.

Hydroxyapatite in the form of hydroxycarbonate apatite is the principal mineral component of bone tissue in mammals. In Bioceramics, it is classed as a bioactive material, which means bone tissue grows directly on it when placed in apposition without intervening fibrous tissue. Hydroxyapatite is hence commonly used as bone grafts, fillers and as coatings for metal implants. This important book provides an overview of the most recent research and developments involving hydroxyapatite as a key material in medicine and its application. Reviews the important properties of hydroxyapatite as a biomaterial Considers a range of specific forms of the material and their advantages Reviews a range of specific medical applications for this important material

"Thrilling, cinematic . . . I loved every minute I spent with the bold, daring women of the Cardinals basketball team . . . The stuff of American legend" (Karen Abbott, *New York Times*–bestselling author). The Boys in the Boat meets *A League of Their Own* in this true story of a Depression-era championship women's team. During the drought and financial crisis of the 1930s, Oklahoma basketball coach Sam Babb traveled from farm to farm recruiting talented, hardworking young women and offering them a chance at a better life: a free college education in exchange for playing on his basketball team, the Cardinals. And as Babb coached the Cardinals, something extraordinary happened. These remarkable athletes found a passion for the game and a heartfelt loyalty to one another and their coach—and they began to win. Combining exhilarating sports writing and exceptional storytelling, *Dust Bowl Girls* takes readers on the Cardinals' intense, improbable journey all the way to an epic showdown with the prevailing national champions, helmed by the legendary Babe Didrikson. Lydia Reeder captures a moment in history when female athletes faced intense scrutiny from influential figures in politics, education, and medicine who denounced women's sports as unhealthy and unladylike. At a time when a struggling nation was hungry for inspiration, this unlikely group of trailblazers achieved much more than a championship season. "A compelling, heartwarming story of a group of college students determined to accomplish the impossible. This is a book you can't put down." —The Denver Post "[A] great sports story about an underdog whose triumphs inspired a community that badly needed a lift in the midst of hard economic times. The fourth edition of Transport Phenomena Fundamentals continues with its streamlined approach to the subject, based on a unified treatment of heat, mass, and momentum transport using a balance equation approach. The new edition includes more worked examples within each chapter and adds confidence-building problems at the end of each chapter. Some numerical solutions are included in an appendix for students to check their comprehension of key concepts. Additional resources online include exercises that can be practiced using a wide range of software programs available for simulating engineering problems, such as, COMSOL®, Maple®, Fluent, Aspen, Mathematica, Python and MATLAB®, lecture notes, and past exams. This edition incorporates a wider range of problems to expand the utility of the text beyond chemical engineering. The text is divided into two parts, which can be used for teaching a two-term course. Part I covers the balance equation in the context of diffusive transport—momentum, energy, mass, and charge. Each chapter adds a term to the balance equation, highlighting that term's effects on the physical behavior of the system and the underlying mathematical description. Chapters familiarize students with modeling and developing mathematical expressions based on the analysis of a control volume, the derivation of the governing differential equations, and the solution to those equations with appropriate boundary conditions. Part II builds on the diffusive transport balance equation by introducing convective transport terms, focusing on partial, rather than ordinary, differential equations. The text describes paring down the full, microscopic equations governing the phenomena to simplify the models and develop engineering solutions, and it introduces macroscopic versions of the balance equations for use where the microscopic approach is either too difficult to solve or would yield much more information that is actually required. The text discusses the momentum, Bernoulli, energy, and species continuity equations, including a brief description of how these equations are applied to heat exchangers, continuous contactors, and chemical reactors. The book introduces the three fundamental transport coefficients: the friction factor, the heat transfer coefficient, and the mass transfer coefficient in the context of boundary layer theory. Laminar flow situations are treated first followed by a discussion of turbulence. The final chapter covers the basics of radiative heat transfer, including concepts such

as blackbodies, graybodies, radiation shields, and enclosures.

Major new fiction from an acclaimed master From the prizewinning writer Stuart Dybek comes a superb new work: a novel-in-stories, eleven masterful tales told by a single voice with remarkable narrative power. In *I Sailed With Magellan*, Dybek finds characters of irrepressible vitality amidst the stark urban landscapes of Chicago's south side; there, the daily experiences of the neighborhood are transformed in the lush imaginative adventures of his hero, the restless Perry Katzek. There is remarkable music in each of Dybek's intertwined episodes, the rhythm of street life captured in all its emotional depth and unexpected humor: a man takes his young nephew to a string of taverns where the boy sings for his uncle's bourbon; a small-time thug is distracted from making a hit by the mysterious reappearance of several ex-girlfriends; two unemployed youths hatch a scheme to finance their road trip to Mexico by selling orchids stolen from the rich side of town; a young couple's amorous beach adventure is interrupted when an unexpected visitor washes ashore. As these poignant, often funny chapters unfold, Perry grapples toward the exotic possibilities the world offers him, glimpsing them even beneath the at times brutal surface of the inner-city. Throughout *I Sailed With Magellan*, fans of Dybek will find the captivating storytelling, the sharp, spare prose, the brilliant dramatization of resilient, inventive humanity that they have come to expect from him.
