Expressive Therapies Continuum is distinctive in its application as a foundational theory in the field of art therapy. First developed by Vija Lusebrink, this theory can be used by persons of any theoretical orientation, and has the ability to unite art therapists of varying backgrounds. The information contained in this book demonstrates how the Expressive Therapies Continuum provides a framework for the organization of assessment information, the formulation of treatment goals, and the planning of art therapy interventions. It provides rich clinical detail and many case examples that enliven the text and promote student engagement and learning. Hinz divides material into three parts. The first describes the historical roots of the Expressive Therapies Continuum and pays homage to contributions from the fields of art and psychology. The seven component parts of the

ETC are examined in the second part, and the last part of the book is dedicated to assessment and clinical applications. This book's easy-to-use format and effectiveness in teaching history and application make it an essential reference for therapists and students. Cut Reality Penguin

“Thrilling, cinematic . . . I loved every minute I spent with the bold, daring women of the Cardinals basketball team . . . The stuff of American legend” (Karen Abbott, New York Times–bestselling author). The Boys in the Boat meets A League of Their Own in this true story of a Depression-era championship women’s team. During the drought and financial crisis of the 1930s, Oklahoma basketball coach Sam Babb traveled from farm to farm recruiting talented, hardworking young women and offering them a chance at a better life: a free college education in exchange for playing on his basketball team, the Cardinals. And as Babb coached the Cardinals, something extraordinary happened. These remarkable athletes found a passion for the game and a heartfelt loyalty to one another and their coach—and they began to win. Combining exhilarating sports writing and exceptional storytelling, *Dust Bowl Girls* takes readers on the Cardinals’ intense, improbable journey all the way to an epic showdown with the prevailing national champions, helmed by the legendary Babe Didrikson. Lydia Reeder captures a moment in history when female athletes faced intense scrutiny from influential figures in politics, education, and medicine who denounced

women’s sports as unhealthy and unladylike.

At a time when a struggling nation was hungry for inspiration, this unlikely group of trailblazers achieved much more than a championship season. “A compelling, heartwarming story of a group of college students determined to accomplish the impossible. This is a book you can’t put down.” —The Denver Post “[A] great sports story about an underdog whose triumphs inspired a community that badly needed a lift in the midst of hard economic times. I can’t wait for the movie.” —The Oklahoman

When death washes ashore on reality TV, who's to blame? "When I heard the premise of *Cut Reality*, I almost died...and I wouldn't lie about that." - Jonny Fairplay, *Survivor* NSFW Join Jason Debord as he seeks clarity following the death of a reality TV co-star and ends up uncovering criminal conspiracy. When Jason returned home from competing on *Beached* he'd lost weight, couldn't sleep, and felt more alone than ever. But, he expected those changes. Jason had no way to

predict that one of his fellow competitors would fling himself from a cliff. Unless he didn't. Jason can't believe it, but the network broadcasts the alleged suicide to the world, so he pushes forward in his own amateur investigation. Met with resistance from the cast and crew, he persists only through the support of his developing romance with Blake, a psychologist who observes alarming similarities between her patient and her partner. Events in Cut Reality have a variety of interpretations. While under the watchful eye of the public, Jason has to decide: is what he uncovers too coincidental to be true, or so hard to accept because it's his new reality. Buy Zack Hacker's anticipated debut novel to find out what Jason discovers... What critics are saying: "On the surface, Cut Reality is a murder mystery; but actually it is much more...Highly recommended for those who like their intrigue steeped in philosophical insights and dilemmas." - Midwest Book Review "[Zack Hacker] makes poignant critiques though subtle plot developments, holding back from judging society at large, but willing to poke holes in some of our accepted values...From the first tension-filled scene...Cut Reality will keep readers guessing, but also leave them with plenty to think about." - SPR "The perfect genre book at the perfect time." - San Francisco Book Review "Cut Reality is the type of thoughtful, provocative work that you don't see

much of in the reality TV fanbase anymore. I had a lot of fun reading it." - Mario Lanza, author of When It Was Worth Playing For, The Funny 115, and host of Survivor Historians " I have always loved books that can surprise me - this book did that and more." - Readers' Favorite Reviews

Hollywood's first sex symbol, the 'It' girl, Clara Bow was born in the slums of Brooklyn in a family plagued with alcoholism and insanity. She catapulted to fame after winning Motion Picture magazine's 1921 "Fame and Fortune" contest. The greatest box-office draw of her day—she once received 45,000 fan letters in a single month, Clara Bow's on screen vitality and allure that beguiled thousands, however, would be her undoing off-camera. David Stenn captures her legendary rise to stardom and fall from grace, her success marred by studio exploitation and sexual scandals.

Why we don't really want simplicity, and how we can learn to live with complexity. If only today's technology were simpler! It's the universal lament, but it's wrong. In this provocative and informative book, Don Norman writes that the complexity of our technology must

mirror the complexity and richness of our lives. It's not complexity that's the problem, it's bad design. Bad design complicates things unnecessarily and confuses us. Good design can tame complexity. Norman gives us a crash course in the virtues of complexity. Designers have to produce things that tame complexity. But we too have to do our part: we have to take the time to learn the structure and practice the skills. This is how we mastered reading and writing, driving a car, and playing sports, and this is how we can master our complex tools. Complexity is good. Simplicity is misleading. The good life is complex, rich, and rewarding—but only if it is understandable, sensible, and meaningful.

"Masterful . . . [A] painstakingly researched, astonishingly erudite study...Tooze has added his name to the roll call of top-class scholars of Nazism." —Financial Times An extraordinary mythology has grown up around the Third Reich that hovers over political and moral debate even today. Adam Tooze's controversial book challenges the conventional economic interpretations of that period to explore how Hitler's surprisingly prescient vision--ultimately hindered by Germany's limited resources and his own racial ideology--was to create a German super-state to dominate Europe and compete with what he saw as America's overwhelming power in a soon-to- be globalized world. *The Wages of Destruction* is a chilling work of originality and tremendous scholarship that set off debate in Germany and will fundamentally change the way in which history views the Second World War.

Major new fiction from an acclaimed master From the prizewinning writer Stuart Dybek comes a superb new work: a novel-in-stories, eleven masterful tales told by a single voice with remarkable narrative power. In *I Sailed With Magellan*, Dybek finds characters of irrepressible vitality amidst the stark urban landscapes of Chicago's south side; there, the daily experiences of the neighborhood are transformed in the lush imaginative adventures of his hero, the restless Perry Katzek. There is remarkable music in each of Dybek's intertwined episodes, the rhythm of street life captured in all its emotional depth and unexpected humor: a man takes his young nephew to a string of taverns where the boy sings for his uncle's bourbon; a small-time thug is distracted from making a hit by the mysterious reappearance of several ex-girlfriends; two unemployed youths hatch a scheme to finance their road trip to Mexico by selling orchids stolen from the rich side of town; a young couple's amorous beach adventure is interrupted when an unexpected visitor washes ashore. As these poignant, often funny chapters unfold, Perry grapples toward the exotic possibilities the world offers him, glimpsing them even beneath the at times brutal surface of the inner-city. Throughout *I Sailed With Magellan*, fans of Dybek will find

the captivating storytelling, the sharp, spare prose, the brilliant dramatization of resilient, inventive humanity that they have come to expect from him.

Rooted and Rising is for everyone who worries about the climate crisis and seeks spiritual practices and perspectives to renew their capacity for compassionate, purposeful, and joyful action. Leah Schade and Margaret Bullitt-Jonas gather twenty-one faith leaders, scientists, community organizers, theologians, and grassroots climate activists to offer wisdom for fellow pilgrims grappling with the weight of climate change. Acknowledging the unprecedented nature of our predicament—the fact that climate disruption is unraveling the web of life and threatening the end of human civilization—the authors share their stories of grief and hope, fear and faith. Together, the essays, introductory sections, and discussion questions reveal that our

present crisis can elicit a depth of wisdom, insight, and motivation with power to guide us toward a more peaceful, just, and Earth-honoring future. With a foreword by Mary Evelyn Tucker and a special introduction by Bill McKibben, the book presents an interfaith perspective that welcomes and challenges readers of all backgrounds.

The fourth edition of *Transport Phenomena Fundamentals* continues with its streamlined approach to the subject, based on a unified treatment of heat, mass, and momentum transport using a balance equation approach. The new edition includes more worked examples within each chapter and adds confidence-building problems at the end of each chapter. Some numerical solutions are included in an appendix for students to check their comprehension of key concepts. Additional resources online include exercises that can be practiced using a wide range of software programs available for simulating engineering problems, such as, COMSOL®, Maple®, Fluent, Aspen, Mathematica, Python and MATLAB®, lecture notes, and past exams. This edition incorporates a wider range of problems to expand the utility of the text beyond chemical engineering. The text is divided into two parts, which can be used for teaching a two-term course. Part I covers the balance equation in the context of diffusive transport—momentum, energy, mass, and charge. Each chapter adds a term to the balance equation, highlighting that term's effects on the physical behavior of the system and the underlying mathematical description. Chapters familiarize students with modeling and developing mathematical expressions based on the analysis of a control volume, the derivation of the governing differential equations, and the solution to those equations with appropriate boundary conditions. Part II builds on the diffusive transport balance equation by introducing convective transport terms, focusing on partial, rather than ordinary, differential equations. The text describes paring down the full, microscopic equations governing the phenomena to simplify the models and develop engineering solutions, and it introduces macroscopic versions of the balance equations for use where the microscopic approach is either too difficult to solve or would yield much more information that is actually required. The text discusses the momentum, Bernoulli, energy, and species continuity equations, including a brief description of how these equations are applied to heat exchangers, continuous contactors, and chemical reactors. The book introduces the three fundamental transport coefficients: the friction factor, the heat transfer coefficient, and the mass transfer coefficient in the context of boundary layer theory. Laminar flow situations are treated first followed by a discussion of turbulence. The final chapter covers the basics of radiative heat transfer, including concepts such as blackbodies, graybodies, radiation shields, and enclosures.
