Students should understand that agriculture itself (whether " certified organic " or " conventional ") is one of the most extensive and

environmentally disruptive land use practices that humans are currently employing.

How Organic Farming Prevents the Use of Fertilizers
Organic farming is an alternative agricultural system which originated early in the 20th century in reaction to rapidly changing farming practices. Certified organic agriculture accounts for 70 million hectares globally, with over half of that total in Australia. Organic farming continues to be developed by various organizations today. It is defined by the use of fertilizers of organic origin such as compost manure, green manure, and bone meal and places emphasis on

techniques such as crop rotation
