There is a BIG jump between GCSE and A-Level. Lots of students find this a massive shock and sometimes find themselves sitting in class lost, not following what the teacher is saying or wishing they had chosen a different subject. This book is designed to help you get started on some of the new content and take your GCSE knowledge to a higher level. Because if you managed to get through GCSE not understanding a topic or skipping over some bits you may find you need the extra help. I'm constantly telling you the best way to learn is by practicing questions, so I've made you a book full of practice questions. 135 multiple choice questions to reflect the style of exam questions, 60 equations for you to balance (in 3 different formats), 65 compounds for you to work out the formula for and a lots of things that you need to recall for A-Level. This book is not designed as a text book or revision guide, but as a workbook. There are lots of good (and bad) expensive and free revision guides out there, on my YouTube channel and other great websites. So there is no point in me adding to the masses. Taking some GCSE topics, a bit further and introducing some new topics for A-Level. This is not a complete list of all the GCSE topics that also come up at A-Level; just enough to keep you (Very) busy over the summer and give you an advantage when you start year 12. All the teaching, all the new content, is available for free on my YouTube channel, this book is for you to practice and learn. The best way to approach this is to watch the teaching video, or after class try a section and check the answers. Topics covered are... (you may feel confident in some of these topics, but are you A-Level confident?!?!)
