The "greening" of industry processes - i.e., making them more sustainable - is a popular and often lucrative trend which has seen increased attention in recent years. Green Chemical Processes, the 2nd volume of Green Chemical Processing, covers the hot topic of sustainability in chemistry with a view to education, as well as considering corporate and environmental interests, e.g. in the context of energy production. The diverse team of authors allows for a balance between these different, but interconnected perspectives. The American Chemical Society's 12 Principles of Green Chemistry are woven throughout this text as well as the series to which this book belongs.

A night of love they'll never forget... Cydney Rayne likes living dangerously. But no thrill can compare to the passionate night she spends with a sexy stranger in Anguilla. The adventure-seeking event planner never expects to see her mystery lover with the sea-blue eyes again. Until he shows up in her Chicago hometown. FBI agent Shawn Miles lives by his credo to honor, protect...and never get emotionally involved. Yet he

can't forget the sensual beauty who shared his midnight beach utopia—and changed his life forever. Rekindling their desire could blow his deep cover and expose her to the dangers surrounding him. But now that they're back in each other's arms, how can he ever let her go?

We live in a consumer society, and over-consumption is the driving force of environmental degradation. This stark reality led Pooran Desai and Sue Riddlestone to found BioRegional Development Group. In this Briefing they show how we can meet more of our needs for wood products, paper, textiles, food and housing from local renewable and waste resources. They outline the theoretical framework of bioregional development and the award winning practical solutions that BioRegional have developed with industry partners. They quantify how we can significantly reduce CO2 emissions and recycle waste, and so greatly reduce our ecological footprint.

Teaching all of the necessary concepts within the constraints of a one-term chemistry course can be challenging. Authors Denise Guinn and Rebecca Brewer have drawn on their 14 years of experience with the one-term course to write a textbook that incorporates biochemistry and organic chemistry throughout each chapter, emphasizes cases related to allied health, and provides students with the practical quantitative skills they will need in their professional lives. Essentials of General, Organic, and Biochemistry captures student interest from day one, with a focus on attention-getting applications relevant to health care professionals and as much pertinent chemistry as is reasonably possible in a one term course. Students value their experience with chemistry, getting a true sense of just how relevant it is to

their chosen profession. To browse a sample chapter, view sample ChemCasts, and more visit [www.whfreeman.com/gob](http://www.whfreeman.com/gob)

While there are many reasons to incorporate sustainable practices into meetings and events, including saving costs and resources, protecting the environment, improving social issues, doing business more efficiently and effectively and attracting new audiences, the number one reason to go green is to do business better. The book is divided into three parts, which reflect defining principles of greener meetings and events: Innovation, Conservation, and Education. This book broadly explores sustainable management in the hospitality, tourism, conference and exhibition, and meeting and event industries, as well as countless smaller industries that include arts and music festivals and tour operators. Readers who are studying in, working in, or even just interested in these industries will reap innumerable benefits from the exciting journey ahead of them in The Complete Guide to Greener Meetings and Events.

Meet the Bioneers—visionary “biological pioneers” who use nature to heal nature. The Bioneers: Declarations of Interdependence, presents the fascinating and inspiring stories of 14 people at the cutting edge of solutions-based approaches to environmental restoration, whose work includes technological innovation, economic strategies, social justice, and a spiritual connection to the natural world. These scientific and social innovators are helping to define a coming Age of Biology founded in principles of kinship, interdependence, cooperation, and community. They share working models for restoration that can be replicated, refined, and spread around the world as vital keys to environmental and cultural renewal. Learn about John Todd, Monika Griefahn, Francisco X. Alarcón, Kat Harrison, Fred Kirschenmann, Jason Clay, Vandana Shiva, and many

more. The Bioneers are inspirational role models demonstrating that individuals can make a positive difference toward creating a sustainable future—on the ground, in communities, in corporate boardrooms, and in the corridors of government. As noted entrepreneur and author Paul Hawken (*The Ecology of Commerce, Natural Capitalism*) says, “The Bioneers are central to the re-imagining of what it means to be human.”

In *Organic Chemistry*, 3rd Edition, Dr. David Klein builds on the phenomenal success of the first two editions, which presented his unique skills-based approach to learning organic chemistry. Dr. Klein’s skills-based approach includes all of the concepts typically covered in an organic chemistry textbook, and places special emphasis on skills development to support these concepts. This emphasis on skills development in unique SkillBuilder examples provides extensive opportunities for two-semester Organic Chemistry students to develop proficiency in the key skills necessary to succeed in organic chemistry.

From the man who knows how to fertilize houseplants with Jell-O and give someone a dry shampoo with Quaker Oats comes the first book of pet care tips that tackles everyday pet illnesses, quirky behaviors, and animal smells and stains by tapping into the power of brand-name products. The ever-inventive Joey Green presents fun and offbeat remedies for a wide range of pet troubles, from bad breath and skunks to hot spots and ticks. Who would have guessed that ChapStik stops a nail bleed or that Listerine can quell itching? Why not forego expensive and toxic flea sprays and use Dawn dishwashing liquid or Johnson’s Baby Powder as a treatment instead? Even though these tips sound quirky (use Smirnoff vodka to clean your pet’s ears?), they really do work because many brand-name products contain soaps, degreasers, emollients, and moisturizers to soothe, clean, dissolve, and heal quickly and safely. Joey Green’s *Amazing Pet Cures* makes a great gift for pet lovers and is a practical guide for anyone looking for

simple and easy shortcuts to live the good life with a pet.

This monograph presents the fundamentals as well as the application techniques of servo control systems, which are a key element of Mechatronics. The industrial applications and problems of Mechatronic Servo System Control are demonstrated as well as its theoretical and applicable solutions. The book is unique in its kind in converting a know-how only suitable for special situations until now into a more universal technology. This introductory monograph is aiming at students and engineers who are involved in the field of Mechatronics and Robotics.

This will be the first textbook on the integration of food, energy and water systems (FEWS). In recent years, the world has seen a dramatic rise in interdisciplinary energy and environmental courses and degrees at the undergraduate and graduate levels. In the US for instance, the number and variety of such programs has increased significantly over the past decade. Simultaneously, national and international initiatives that integrate food, energy and water systems have been launched. This textbook provides a substantive introduction to the food-energy-water nexus suitable for use in higher level undergraduate and graduate level courses and for scholars moving into the field of nexus studies without a strong background in all three areas and the many aspects of nexus studies.

Introduction to Organic Chemistry, 6th Edition provides an introduction to organic chemistry for students who require the fundamentals of organic chemistry as a requirement for their major. It is most suited for a one semester organic chemistry course. In an attempt to highlight the relevance of the material to students, the authors place a strong emphasis on showing the interrelationship between organic chemistry and other areas of science, particularly the biological and health sciences. The text illustrates the use of organic chemistry as a tool in these sciences; it also stresses the organic compounds, both natural and synthetic, that surround us in everyday life: in pharmaceuticals, plastics, fibers, agrochemicals, surface coatings, toiletry preparations and cosmetics, food additives, adhesives, and elastomers. This text is an unbound, three hole punched version. Access to WileyPLUS sold separately.

This open access book brings together research findings and experiences from science, policy and practice to highlight and debate the importance of nature-based solutions to climate change adaptation in urban areas. Emphasis is given to the potential of nature-based approaches to create multiple-benefits for society. The expert contributions present recommendations for creating synergies between ongoing policy processes, scientific programmes and practical implementation of climate change and nature conservation measures in global urban areas.
