This book is the outcome of a six-month research contract undertaken by Ghent University's Research Group Drug Policy, Criminal Policy and International Crime for the Belgian Minister of Justice. Since 1996 the Belgian Government has produced Annual Reports on Organised Crime,

and while currently this takes the form of a typically descriptive situation report there has always been the intention to further develop the methodology underwriting the report. It has been envisaged that such methodological development will rely upon the use of supplementary non-police data -both qualitative and quantitative - supporting the utilisation of more sophisticated analytical tools. Proceeding from earlier work undertaken by this research group for the Belgian Federal Police's Organised Crime Unit, this book is an elaboration of the ideas found in *Measuring Organised Crime in Belgium: A Risk-Based Methodology* (in which a method for determining the impact of organised crime in Belgium is proposed) for application in the context of the Annual Reports. Thus, the substance of this book is a discursive analysis of the issues surrounding a risk-based Annual Report on Organised Crime. As the result of applied research, *Reporting on Organised Crime* offers concrete recommendations and solutions for the analysis of organised crime and its

reporting at the strategic level.

Recent years have been characterised by growing awareness among European member states about serious shortcomings to the way organised crime is measured and assessed. Currently, organised crime reports primarily generate descriptive analyses of a past situation based on law enforcement data and do not always provide the necessary information for proactive and preventive policy strategies. Therefore an EU Action Plan has been issued to develop a more future oriented and risk based methodology for the measurement of organised crime and to convert the traditional organised crime situation reports into strategic reports for planning purposes. This book is the outcome of two studies undertaken by a team composed of Belgian, Italian and Swedish researchers for the European Commission. It presents an overview of current practices in the measurement of organised crime

in Europe and includes a discussion about the concept and the assessment of the impact of the phenomenon. Further the feasibility of the implementation of the existing EU Action Plan was studied and evaluated. As a result of applied research *Measuring Organised Crime in Europe* provides an in depth and comparative analysis of current practice in drafting organised crime reports across and by the EU and offers new ideas to improve their quality.

This is the 29th report of the European Union Committee from the 2007-08 session (HLP 183,

ISBN 9780104013700) and looks at clearance. A success for Europol (the European Police Office) and its efforts in coordinating the fight against serious and organised crime. Europol began in 1999 and will, by 2010 be established as an agency of the EU. The Council Decision bringing about this change in its constitution has made some amendments to its powers, working methods and governance, but in the Committee's view represents a missed opportunity. The Committee finds it is a matter of concern that four-fifths of the information exchanged by national liaison officers stationed at Europol is exchanged without actually going through Europol and is therefore not added to Europol's database. Member States are reluctant to share sensitive information. The Committee believes that Member States should station at Europol only officers and officials with a high security

clearance. A success for Europol has been the analysis of information to help investigate particular categories of crime and following the UK's influence in focusing on organised crime in particular. The Committee believes that other Member States need to be persuaded on the importance of planning for future threats. The Committee also believes that the existing structure for the governance and management of Europol could be enhanced by clarifying the respective duties of the Director and Management Board. Further, the Committee states that if the Treaty of Lisbon came into force, accountability of Europol to the European Parliament and national parliaments would improve.

The construction industry faces continual challenges and demands, due to market

conditions and coercion by governments, for improvements in safety, quality and cost control, and in the avoidance of contractual disputes. To meet these challenges construction enterprises need to constantly seek new directions and business models in construction management. A number of tools, methods and concepts have been developed and advocated as aids to achieving improved performance, but many in the industry find them confusing or are sceptical of their relevance. The third edition of Construction Management: New Directions brings together, in a single volume, detailed discussion of a range of contemporary management concepts which are relevant to the construction industry, including strategic management; benchmarking;

reengineering; partnering and alliancing; enterprise risk management; total safety management; total quality management; value management and constructability. It provides a straightforward, accessible and objective account of these concepts, showing how they interrelate and can be used to improve the performance of the construction firm. This research based text will be essential reading for industry leaders and practitioners, as well as researchers, postgraduate and senior undergraduate students. From a review of previous editions I am in no doubt that this book will quickly become a favourite among students and practitioners alike

Organisations are using data, information and knowledge as a competitive weapon. Their data, information and knowledge are arguably their most valuable assets. Yet, this fourth asset is managed badly when compared to the other three assets, namely money, people and infrastructure with considerable risk to the organisation. Executives are accountable for the success of their organisations, and those who don't manage this critical resource and business enabler effectively can be regarded as negligent. Information Assets carry enormous risk and value. Most boards and executives don't know how to govern and manage IAs effectively and nobody is held accountable. Given this, organisations should govern and manage their Information Assets the way they manage their Financial Assets. The benefits of managing IAs well are compelling. These

benefits include increased efficiency, productivity, employee satisfaction, improved decision-making, mitigating business risk and improving product, protecting corporate reputation and service delivery. Drawing on ground-breaking research, this book explains why Information Assets are so important to organisations and the barriers to managing them well. This book is unique in the sense that it takes a fresh look at this topic, is based on experience and research, and includes interviews from more than 70 industry leaders. In short, this book is written by executives and explains where to start.

CIMA C1 - Fundamentals of Management Accounting: Paper C1, Fundamentals of management accounting, introduces the knowledge and skills needed in the application of management accounting. Students will need to have knowledge of management accounting techniques and have an understanding of when and when not to use them. C1 is examined via a computer-based assessment containing fifty objective test questions. The syllabus has five sections: * Cost determination * Cost behavior and breakeven analysis * Standard costing * Costing and accounting

systems * Financial planning and control. The C1 Study Text contains all you need to know for C1, featuring step-by-step guides to management accounting techniques such as process costing, which many students find tricky. All areas of the syllabus are explained fully and no prior knowledge is assumed. Key terms are identified throughout as grasping terminology is vital for both C1 and for future studies. For a practical, hands-on approach to learning forensic psychology, *Experiments in Anti-Social Behaviour: Ten Studies for Students* presents a collection of unique projects for students that illustrate the many ways research into anti-social behaviour can be conducted whilst also highlighting social

psychological aspects of criminality. Drawing on over half a century of supervising many hundreds of projects at high school, undergraduate, master's, and doctoral levels, David Canter provides well-grounded and detailed guidance for students on how to execute a range of different research studies through several psychological approaches, including quantitative cognitive studies, qualitative discourse analysis, and social identity theory. After introducing the ethical and practical challenges of studying crime and criminality, *Experiments in Anti-Social Behaviour* outlines broad approaches to research. This is followed by ten practical studies for students to carry out in order to engage directly with experimental research. These studies cover experiments, surveys, and case studies, and include a controlled examination of how

easy it is to forge a signature, descriptions of experiments trying to detect deception, and an exploration of what is involved in linking actions in a serial killer's crimes to his characteristics. Both engaging and interactive, *Experiments in Anti-Social Behaviour* is an invaluable resource for instructors and students from colleges and universities around the world in many different fields, such as psychology, criminology, and socio-legal studies. It will also be of interest to all those who want to know more about the psychology of crime and criminality.
